THE ISLAND OF SARDINIA AND ITS PEOPLE

Traces of Many Civilizations to Be Found in the Speech, Customs, and Costumes of This Picturesque Land

By Prof. Guido Costa

With Illustrations from Photographs by Clifton Adams, Staff Photographer, National Geographic Magazine

HUB of the western Mediterranean is Sardinia. Along the trade route spokes which bind this rocky island to surrounding lands, a thousand diverse influences came to flavor the life and color the character of the Sardinians.

From the time when Phoenician ships found in Sardinia a counterpart of their home ports, where Lebanon comes down to meet the sea, the island west of the instep of the boot of Italy has been overrun by one race after another. Three continents have left their impress on the life and features of the people.

The island has lain open to influences from without. But the mountains, which almost monopolize the land, have so segregated the various parts that to this day each village has a flavor of its own.

Sardinia is still unspoiled. The banditry of the open road has become a mere tradition and the most romantic islander is liable to prove a solicitous friend. Hotels are few and trains are leisurely. But so diverse, so interesting, is the life among the rounded hills and on the widespread Campidano that the traveler is well repaid for such discomforts as result from sharing the life of the people, whose hospitality with the little they have shames the greedy magnificence of famed resorts.

Poor though she be in worldly goods, Sardinia is rich in welcome for those friends who come to visit her, try to understand, and willingly submit themselves to the same curious study that they give to the Sardinians in whose homes they live.

IRRIGATION AND AUTOMOBILES MAKE THEIR ADVENT IN SARDINIA

And let not the apostle of progress and standardized life be discouraged. European clothes are displacing the brilliant costumes for which Sardinia is rightly famous. Cagliari, citadel-crowned, now jangles with trami-cars which serve the lower town, with its steel-framed buildings beside wide thoroughfares. Automobiles are already disputing the roads with slow-paced oxcarts on crude wooden wheels. Irrigation works are under way, and soon the turbulent streams will be impounded in great inland lakes, with all the countryside enlivened by electricity, while vast regions are reclaimed for agriculture.

As yet, however, the story of travel need not mourn too much. In the inland regions, Sunday flames forth in scarlet glory from the somber garb of working days, and diminutive donkeys and patient oxen slowly plod the roads which Romans built when Rome was mistress of the
PANORAMA OF CAGLIARI FROM THE SEA (SEE TEXT, PAGES 72 AND 74)

The largest port and most important city of Sardinia has a population of 70,000. Its wide Via Roma parallels the busy waterfront, and the new municipal building on the left is the finest in the island.

EVENING ON THE PLAIN OF MUTTOS, NEAR TORRALBA

There are many flocks of sheep on the flat pasture lands, cared for by shepherd boys.
Here the great piles of salt are handled by steam shovels. The sale of this commodity is under control of the government and is combined with the sale of tobacco in the thousands of little shops throughout the kingdom.
A MAP OF THE ISLAND OF SARDINIA

In area, Sardinia is slightly smaller than Massachusetts and Rhode Island combined, with about one-fifth the population of those two States.

world. If the motor car does intrude amid bucolic solitude, it serves to carry one through charming scenes of rich diversity and thread upon a brief itinerary such smiling welcomes as one would travel far to see in larger and more favored lands.

The greater portion of the island is covered with low mountain ranges, most of which have a round, smooth shape. The southeast regions have peaks of Alpine grandeur, but the highest mountain in the island, the Gemmargantu, is
more imposing for its mass than for its altitude of 6,233 feet. Its summit, which commands a wonderfully extensive view, may be easily reached on horseback, although its loftiest peaks are snow-covered during much of the year.

"SARDINIA TURNS ITS BACK UPON ITALY"

Along the eastern coast of Sardinia runs a mountain chain which presents a brusque escarpment toward the mainland and makes the island difficult of access on this side. No safe natural harbor or well-sheltered bay is to be found between Cape Carbonara and Aranci Bay.

On the western side, the mountains have gentler declivities, and here are situated the most beautiful gullies of all the island—the gulf of Palmas, so much spoken of by Admiral Nelson, and the Porto Conte near Alghero, a natural harbor capable of sheltering the most powerful fleet in the world.

The most extensive Sardinian plain is that which stretches northwest from Cagliari to Oristano. It produces on the traveler a strange impression. Although it is scarcely 50 miles in length, it appears immense, for it is proportioned to the scale of surrounding objects, especially to the modest height of the mountain ranges which limit it.

In spring this plain, the two parts of which are respectively named the Campidano of Oristano and the Campidano of Cagliari, is covered in its uncultivated tracts with the most beautiful wild flowers, which impart to the scenery a warm, variegated tint and greatly embellish the landscape.

During the summer months a pitiless sun with scorching rays dries and burns everything, and the plain, covered as it is with a yellow, monotonous mantle of dried herbs, takes on a desolate appearance. The unpretentious villages, built of sun-baked bricks, acquire an aspect more miserable than before.

FIVE MONTHS OF THE YEAR WITHOUT RAIN

From June to the end of October no rain falls on the island. From week to week one cannot detect the slightest cloud in the blue sky, which in the hottest hours assumes a milky tint.

Two other plains, less extensive and interesting, lie in the upper part of the island—the Plain of Nurra in the northeast, which ends at Argentiera Cape, and the Campo of Ozieri, which lies near Chilivani, a junction point where four railway lines converge. Both have a somewhat different aspect from the Campidano.

With these exceptions, Sardinia, especially in its central part, is but a network of mountain ranges, an uninterrupted mass of round-topped, treeless hills, green and lovely in spring, yellowish brown and desolate in summer, although here and there, along the slopes of the Barbagia Mountains, patches of verdure are found, even in the hot season.

DEVELOPMENT DEPENDS ON FOUR RIVERS

Naturally one would expect many rivers in an island of many mountains; but in Sardinia this is not the case. Owing to the scarcity of rain during several months of the year, Sardinian streams hardly deserve the name of rivers. In winter, after drenching rains, they become true torrents and are rapid and dangerous in their course; in summer they dry up almost completely, and a narrow rivulet of muddy water, which can easily be crossed at one step, is frequently all that remains of an impetuous winter torrent.

Sometimes a four-arched iron bridge spans a narrow ribbon of water between
THE TOWER OF THE ELEPHANT, ONE OF THE LANDMARKS OF CAGLIARI

This relic of medieval Pisan rule is in an excellent state of preservation, with its coat of arms, statuette of the elephant, and iron-bound portcullis (see text, page 74)
THE ISLAND OF SARDINIA AND ITS PEOPLE

THE ANCIENT PONTE ROMANO OVER THE OLTAVA AT PORTO TORRES

Its seven arches of unequal span are constructed of huge blocks of stone.

...stretches of flints which mark the course of a wet-season river.

The four main rivers deserve a special note, because on their regulation depends the welfare and prosperity of the whole island.

The Tirso has its source in the granite table-land of Budduso, in the upper part of the island, and after a course of 84 miles debouches at Oristano Bay, where in ancient times rose the Roman town of Tharros. The Flumendosa rises in the mountains of Barbajia and enters the Tyrrenian Sea near Muravera, on Corallo Bay. The Coghinas, which has its source in the mountain ranges of the Marghine, in northwestern Sardinia, empties into the Asinara Gulf, and the Temo enters the sea near Bosa.

SARDINIA EXPECTS TO HAVE LARGEST ARTIFICIAL LAKE IN EUROPE

In the central part of the island an imposing dam, 235 feet high and 250 feet thick, has been constructed. It is designed to retain and collect the waters of the Tirso in such a way as to form an artificial lake about 12 miles long and 40 miles in circumference, which will be the largest of its kind in Europe. Electric turbines will supply current throughout a large part of the island.

A special feature of the construction is that the turbines and the electric machinery are placed in the very body of the dam. The overflow is to be collected in a large reservoir near Fordinianus, and by means of three canals the water of the Tirso will be directed to flow through the plains which surround Oristano, watering an extensive tract of cultivable ground, to the great advantage of agriculture and improvement of health conditions. The turbines are already at work and electric current is being provided at a cheap price, both for lighting and industrial purposes.

The scenic features of the valley where such imposing works are being carried out will be quite changed, and in summer the plain near Oristano will not have the same appearance as now. When the artificial lake is formed, the rocky, barren flanks of the hills, now covered with wild shrubs, will be replaced by large tracts of cultivated, well-watered ground. Factories
A PANORAMA OF BOSA FROM THE RUINS OF THE ELEVENTH CENTURY CASTLE OF SARRAVALLE

The view includes the new city and the ancient canal dug by the adventurers from Carthage who first settled here. The seaport is situated on the river Temo a mile and a quarter from its mouth.
FISHING BOATS COME UP THE OLD CHANNEL DUG FROM BOSA TO THE SEA

The old castle of Malaspina looks down on the town from the summit of an adjacent hill (see also illustration on opposite page).
The Roman Amphitheater on the outskirts of Cagliari

This theater is sometimes used to stage Greek plays, the audience sitting as did the Romans on the rock-ewn seats and on stones scattered over the hillside. Under the seats are passageways for the actors (see text, page 17).
will rise where now there are only a few miserable huts, inhabited by poor shepherds who guide their flocks in search of scanty food.

The Flumendosa, though it has a shorter course than the Tirso, is certainly more impressive, both for the volume of the water it carries and the picturesqueness of its banks. It flows between barren hills, but during the summer its banks are covered with oleander bushes. The landscape assumes a lovely appearance, and the pink flowers of the oleander mingle with the brown hillsides, while the river, which even in the hottest months retains a considerable volume of water, winds here and there, or spreads wide its flood, according to the conformation of its bed.

The landscape in this part of the island is typically Sardinian. Villages are situated far apart. Occasionally a flock of white sheep studs the side of a hill, where a small stone inclosure around a cone-shaped, thatch-roofed hut indicates the existence of a fold. The highroad, in splendid condition for motoring, in spite of innumerable curves and hairpin turns, runs along the side of overhanging hills, barren and white.

Another stream which enters the sea on the western coast is the Temo, on whose banks the town of Bosa is built. It looks more like a river than any other watercourse in Sardinia. Boats with widespread sails can ascend the current for almost two miles, and near Bosa the river flows amid the most beautiful orchards and gardens in Sardinia; but its course is so short and the roadstead into which it empties so open that the Temo has no commercial importance.

The same firm which has planned and carried out the construction of the Tirso dam has been commissioned to build similar reservoirs for the Coghinas, Flumendosa, and Temo rivers.

**SEA POOLS A FEATURE OF THE SOUTHERN PROVINCE**

Along the Sardinian coast, chiefly in the southern province, are considerable sheets of water, popularly known as *stagni di mare* (sea pools). Cagliari is surrounded by such pools, which, being in direct communication with the sea and retaining in their water a considerable amount of salt, are not dangerous to health, as the larvae of mosquitoes cannot live in them.

The lake of Santa Gilla near Cagliari forms a striking feature of the landscape and is the haunt of innumerable wild ducks and other waterfowl. Especially is it a favorite spot for the flamingoes that emigrate from Africa to spend the hottest months of the year in the neighborhood of Cagliari.

In August, a little after sunset, those strange birds may be seen flying high above the city, in their daily journey from the west pool to the east. Seen from below, they look like so many crosses, with their outstretched necks, trailing legs, and short wings.

**THE MAIN ISLAND SURROUNDED BY ISLES**

The stern Sardinian coast, with its spurs and cliffs, presents an abrupt eastern wall with few indentations. On the western side, the shore has a gentle slope as far as the Gulf of Alghero and Porto Conte; the latter, however, being surrounded by high cliffs which form Cape Caccia, site of the famous Neptune Grotto. This is well worth visiting, but is difficult to enter, as its mouth is situated at sea-level and the slightest breeze piles waves against the entrance.

The main island is surrounded by small isles, of which Sant’Antioco is the largest. A narrow tongue of land, with the aid of a short bridge built by the Romans, connects it with the mainland. Next comes the island of San Pietro, on which is Carloforte, center for the most important tuna fisheries in Sardinia.

Off the northeast corner there is a group of small islands, the most important being La Maddalena and Caprera. The latter is justly called the Sacred Island. Here lived and died the great Italian patriot Garibaldi, hero of two hemispheres. Many other unimportant islets are scattered around the Sardinian coast.

Sardinia is rich in prehistoric remains. No part of the island is entirely devoid of those quaint old monuments, which have defied time and weather and are still standing as evidences of an old civilization and a demonstration that the first Sardinians could not have been mere savages.
THE SOUTHERN SIDE OF THE PORT OF ALGHERO

After its evacuation by the Catalonians this city flourished under the rule of the Pisans, who fortified it with a wall and many watch towers, some of which are visible to-day.
A LAZY SUMMER MORNING IN THE PIAZZA AT OSILO

This is the fruit market whenever there is any to sell, but it is always the loafing place for peasants as well as for the people of the village.
THE TOWN CRIER, OR "BANDITTORE," MAKING AN ANNOUNCEMENT IN A MOUNTAIN VILLAGE

Between blasts of his little brass horn he is telling the assembled crowd that fine watermelons may be bought at the first house south of the church.
WHEN THE GRAPES ARE RIPE IN THE CAMPIDANO

The women and children help to unload the heavy ox carts when they come to the large farm sheds from the vineyards. The grapes are pressed in a small hand press, then stored for a short time in large hogsheds before the wine-making process is continued.

SNAILS FOR SALE

There are many varieties of small snails offered in the market place of Sassari. The Sardinians, like the French, prize them as a delicacy.
The traveler has always before his eyes these relics of the earliest ages, over which the cloudy wings of time have spread their shadow. These nuraghi are un-mortared megalithic constructions shaped like truncated cones. After much controversy, archeologists have at last agreed that they probably served as fortresses, watch-towers, and even habitations for the tribal chiefs* (see page 56).

Many of these prehistoric structures, of which more than 3,000 are scattered throughout the island, are in an excellent state of preservation.

Nor should the visitor fail to see such other ancient ruins, dating from the bronze age, as the domus de gianax (witches' houses) and sepolturas de gigantes (giants' sepulchers), which are tombs excavated in the natural rock or temples to ancient deities.

Sardinia spreads wide its history book at the page which records man's earliest existence. Treatises on Sardinian archeology are numerous and valuable, and whoever wishes to do so may study the subject thoroughly.

ANCIENT ROME HAS LEFT HER INDELIBLE IMPRES

The Roman occupation left interesting remains. Both in the Northern and the Southern Province there are relics of bridges, temples, and aqueducts. Cagliari can boast an amphitheater almost entirely excavated in the natural rock, where steps, corridors, passages, and dens for wild beasts are still to be seen (see page 10). Called by the Romans Carales, this was in ancient times, as it is to-day, the principal town in the island (see page 74).

Of such old Roman towns as Nora, Sulci, Olbia, and Tharros, all situated on the coast, only a few remains can now be traced, where solitude and silence reign. It is sad to wander among those relics of piers, temples, houses, and paved roads, so busy with life when Rome was the mistress of the world.

*See "Little-Known Sardinia," by Helen Dunstan Wright, in the National Geographic Magazine for August, 1916.
A GROUP OF PEASANTS IN CAMP DURING THE FESTIVAL OF SANTA GRECA

Many families from the Campidano, north of Cagliari, come with cooking utensils and musical instruments and camp out for the duration of the festival (see text, page 56).
A SARDINIAN PEASANT DANCE HELD IN A KITCHEN

Sometimes there is music from guitar or accordion, but more often the solemn dancers rock slowly back and forth in time with the wordless chant sung by one who is familiar with ancient customs and legends.
PREPARING THE EVENING MEAL

In many of the poverty-stricken homes of the mountain villages it is the grandmother who fans the blaze in the fireplace to cook the family's supper, usually one dish consisting of a mixture of vegetables.
To give an account of the medieval history of Sardinia, however short, would be a hard and useless task. The Sardinians themselves, incredible as it may seem, are as ignorant of their own history as any foreigner who comes to visit the island.

It is, however, convenient to convey a general idea of Sardinian history, as many existing conditions are explained by incidents in the past.

Such medieval monuments as Sardinia possesses are in complete ruin. Of the castles only a few moldering walls remain; so that any investigation concerning their shape, the disposition of their halls, or the splendor of their stately rooms is almost impossible. A ruin, a name, a legendary history of doubtful accuracy—these are all that remain of the castles which once held the summits of the Sardinian hills.

The age of Pisan domination was not a happy one for Sardinia, for never as in that period were the people so imposed upon and taxed; nevertheless, the island is indebted to that city for its art. Many Pisan churches of exquisite Tuscan architecture are scattered throughout the island, but as they formed a part of monasteries
A homemade flour mill in a Sardinian kitchen.

The mill consists of a stone basin, which the peddler mixes into a smooth paste. The mill is fed with water through a waterwheel, which drives the stone basin. The flour is then passed through a small opening to the miller, who uses a hand crank to turn the stone basin. The flour is then sieved and ground into the desired consistency.

Pompei and Heraclea are mentioned as two places where bread is done in the home.
PREPARING BREAD FOR THE OVEN

The dough for the large, thin, circular pieces of bread known as “carta di musica” is brought to the rolling-board in large balls in a basket. On account of the swarms of flies found everywhere, the loaves are wrapped in a long piece of cloth, then carried in a tray on the head to the nearest oven for baking (see text, pages 52, 53, and 54).
and convents; they were built in spots remote from the main roads, so that those best preserved cannot be visited without some trouble.

**TWO SARDINIAN CASTLES FIGURE IN DANTE’S EPIC**

Two castles built in the Middle Ages are worthy of mention, both for their historical importance and because the names of their owners are recorded in Dante’s “Divine Comedy.”

The first is the Castle of Goeccano, known also as Castello di Burgos, a name taken from the village which lies at its foot (see Color Plate VI). It was built in 1127 by Gonario, one of the giudici of Logudoro, and there lived and died the unhappy Queen Adelasia of Torres, wife of Enzio, a natural son of Frederic II. This Sardinian queen also seems to have had some connection with that Michele Zanche whom Dante pictures in the depth of his Inferno, among the *barattieri* (cheats). The castle stands in a very picturesque position and commands a splendid view of the whole district known as the Goeccano.

The other castle, situated near Iglesias, was called Aqua Fredda (cold water) and belonged to the powerful Pisan family of the Counts of Gherardesca, of whom Count Ugolino was one of the most important members. Those acquainted with the “Divine Comedy” will recall the celebrated canto of the Inferno where Dante gives a thrilling description of the death of Count Ugolino, doomed to die of hunger with his sons and nephews in the famous tower of Pisa.

Other castles, such as that of Malaspina, erected on the hill overhanging Bosa (see illustration on page 9), and Castle Doria, in the Northern Province, are in a state of utter neglect and desolation, though they still afford precious material for the historical and sensational novelist.

**HISTORY OF THE MIDDLE AGES IS CLOUDY**

The Vandal invasions, the destruction of the monasteries, the neglect of ancient monuments, the lack of books and parchments, the many conflagrations which destroyed archive and sacristy, the mania of Sardinian peasants for digging and de-
stoving every ancient monument in the hope of finding hidden treasure—all make the history of Sardinia in the Middle Ages rather a cloudy one.

With the exception of Cagliari, whose Castello, with its preserved towers, entrance gates, ramparts, and fort, retains even in modern times many traces of medieval life, the towns and villages in Sardinia have scarcely a monument worth mentioning.

The history of Sardinia might be summed up in a few words. Invaders in every age came to pillage, to carry away treasure, and to impose heavy taxes on the inhabitants, who had to fight incessantly lest they be torn to pieces by these birds of prey.

Then Sardinia had to endure Spanish rule, which brought misfortune to the whole island. Even at present many prejudices, hypocrisy, and false standards for judging life are but lingering traces of those Spanish rulers who carried away all the treasure they could, but left as a sad souvenir of their sway the worst traits of their character.

The Sardinian historian, Enrico Costa, has written a sonnet entitled "The History of Sardinia." It gives a better idea of Sardinian history than many textbooks on the subject. Here is a literal translation:

Phoenicians and Greeks and Africans made her their prey and built the Nuraghi.
Carthaginians tried to make the most of her and the Romans contented themselves to keep her in slavery.
Then the Vandals, the Greek emperors, and the Moors worked her complete ruin.
Under the Pisans she had monks and lords, but Genoa, the usurer, treated her as a vile servant.
The Aragon dynasty gave her feuds.
Spain kindled petty jealousies and asked for gold.
Piedmont appreciated the trick and ruled over her between altar and gibbet.
She was French and German, now she is Italian, but if God does not save her, no one knows what she will become.

The last verses of Mr. Costa's sonnet sound rather too bitter. The author wrote them several years ago, when the Italian Government almost completely neglected the island and when political offenders were sent to Sardinia as a penal colony.
GATHERING THE FRUIT OF THORN-PROTECTED CACTI

In the summer time women and children gather the sweet fruit of the "Indian fig" with long bamboo poles. An Italian syndicate proposes to erect a factory in southern Sardinia to make commercial alcohol from this fruit, which is rich in sugar (see text, page 30).

TEMPIO KEEPS ITS HOGS IN STONE HOUSES AND PENNS ON A HILLSIDE BELOW THE TOWN

The pigs are taken to the country to forage during the day and brought home each night.
Sardinia will always be Italian. Her sons have a strong attachment for their motherland, and Italy in turn owes much to the Sardinians for what they did during the World War. No soldiers proved more faithful and brave.

In this connection, it is appropriate to record that Sardinia will never forget what the American Red Cross has done for her children. This great organization has taught us to train our young people as Americans train their own.

**Variety in Manners and Costumes**

In Sardinia, which is so small in comparison with the countries by which it is surrounded, an intelligent visitor is at once impressed by the variety of scenery within a limited field. He notes, too, a difference in manners and habits between the inhabitants of neighboring districts and his ears soon detect the different dialects spoken in the villages through which he passes. The infinite variety of manners, speech, and costumes enhances the pleasure of his tour.

In reply to a letter from the Italian poet D’Annunzio, asking for some colloquial expressions in Sardinian dialect which he wanted to put into the mouth of one of the characters of his comedy, “Piu che l’Amore” (More Than Love), Enrico Costa replied:

“Your faithful Sardinian servant, who is very affectionate toward his master, begs leave to point out that it is erroneously believed by the people of continental Italy, and often by the islanders themselves, that Sardinia has but one aspect. It is not so. Sardinia may be divided into zones, and from zone to zone there is a great change of scenery, habits, customs, language, and expressions. Tell me, then, if you please, in what part of Sardinia you want your servant to be born?”

Five years later J. E. Crawford Flitch wrote, “Sardinia is as surprising in its physical as in its racial contrasts.” He makes a comparison between the highlands of Nuoro, which he calls the Switzerland of Sardinia, and the low, marshy lands of Oristano, which suggest to him Holland; yet from one district to the other is but a few hours in what he calls ‘toy trains.’"
THE ENTIRE TOWN OF SENNORI, NEAR SASSARI, MAKES BASKETS FOR HOME USE AND FOR THE MARKET

The basketware of the community is of rather coarse construction; the interior is of wheat straw wrapped with rough palm leaves. The design is woven into the basket (see text, page 75)
One cannot too strongly stress the diversity within an island only 160 miles long and 70 miles broad. So, instead of giving a systematic description of Sardinia from north to south, or from east to west, it will be much better to treat separately such regions as present the greatest contrasts. It will be easy for any reader to trace them on a map (see page 4).

A BIT OF OLD SPAIN IS TRANSPLANTED IN SARDINIA

If one visits Alghero and has previously traveled in Catalonia, he is at once struck by the resemblance between this Sardinian town and various places in Spain. In fact, Alghero cannot be called a Sardinian town. It is a colony from ancient Catalonia, and has kept unchanged the character of its early Spanish settlers.

The very appearance of the streets, with their four-storied houses; the men, with their faces neatly shaven, who suggest some Spanish matador; the language, which is almost pure Catalan — all make Alghero seem actually "foreign" to such a place, for example, as Villanova, with its gorgeously costumed women, situated only a few miles away.

Sassari, the capital of the Northern Province, is surrounded by olive groves whose stretches of gray-leaved trees are now and then broken by vast vineyards. The white limestone rocks are very soft and the country roads, incredibly dusty, have a whiteness which dazzles the eyes. The town itself is not so peculiar, but its inhabitants have a character which differs greatly from that of the other islanders. The Sassarese is talkative, gay, sociable, and hospitable, with a bit of humor tingeing every subject he discusses.

No writer, ancient or modern, has ever failed to speak of the Fountain of Rosello. It is curious to note how authors of different ages have invariably reported what was said about that modest monument by previous visitors; so that a legend has arisen about the extreme beauty of a fountain which possesses little.

In 1849 an English writer said: "Few cities can boast a handsomer fountain than Rosello." In 1885 another English writer printed the same words, and the quaint old monument, so modest in its dimensions and so plain in its ornaments, having nothing but historical interest, is favorably compared with the splendid fountains in which the Italian cities are so rich.

The legend is, however, so strongly rooted that not to speak of the fountain of Rosello when describing Sassari would be considered a serious fault (see p. 57).

Sassari may be called one of the foreign towns of the island, such as La Maddalena, Carloforte, and Alghero. It was a Pisan colony and the dialect spoken there still retains some Tuscan characteristics.

La Maddalena is a Corsican colony and life is conducted there in accordance with the customs and habits of the motherland. The language spoken is almost a pure Corsican dialect, mingled with some Genoese words; but the visitor must be extremely careful in judging racial characteristics, for in La Maddalena live many Italian families.

Carloforte, which has taken its name from King Charles Emanuel III, is a pure Genoese colony. The isle of San Pietro, on which the town is situated, was given to the inhabitants by King Charles when he ransomed them from slavery. In former days the people inhabited the isle of Tabarca, off the Tunisian coast, and through an incursion of pirates all its inhabitants were made slaves and sold at the slave market in Tunis. That small, clean, lovely town is making successful efforts to thrive and improve, but being a smaller island, unconnected with Sardinia, its isolation is doubled.

FAMOUS NOVELIST DEPICTS ONLY ONE PHASE OF SARDINIAN LIFE

The Sardinian novelist, Mrs. Crazia Deledda, has through her stories made the island known to Italians and to such other readers as have had the fortune to read them, but she has pictured only one phase of Sardinian life.

The description which she gives of that part of Sardinia where her heroes and heroines live is not inaccurate, but her works have had a deleterious influence on the estimate formed by people generally concerning the island. The part of Sardinia pictured in Mrs. Deledda's descriptions is a small region, which, however interesting and characteristic it may be, is extremely circumscribed.
On the green plains of the Campidano, which surround Cagliari like an ample lawn, are large villages which are sure to interest the tourist or artist in search of the picturesque.

ROADS ARE HEDGED WITH CACTI

The Campidano villages are approached by long, dusty, sunburnt roads, widespread between hedges of the prickly pear cactus, with its purplish edible fruits, so common on the Mediterranean shores. The fleshy stems bristling with spines, which in the southern variety are long and stiff, are so tightly interwoven that trespassing is quite impossible.

During August and September women are often seen near these hedges, gathering the ripe fruit, which is fed to pigs. They use a long reed, which has been split at the top so as to form a kind of funnel that serves to clutch the fruit, tear it away and throw it on the ground. When a certain number of pears are thus plucked, another woman with a broom brushes off the microscopic prickles, after which the fruit is put into a basket (see page 26).

Sometimes the plain extends monotonous and uninterrupted for miles and miles and the villages, whose houses are invariably built of sun-baked bricks, almost disappear amid brown furrowed fields.

The village streets are broad and sunny, but frequently in the very middle of the thoroughfare is a puddle of muddy water, which disappears only in the hottest months of the year. Now and then newly built houses with whitewashed walls and some pretensions to architecture, form a strong contrast to these long streets bounded by high, bare walls.

At short distances the flanking walls are interrupted by arched gateways, with large doors which have in the lower part two apertures, like those we often see in the lofty entrance doors of convents. This entrance is called in the Campidano dialect *su portali.*

These doorways constitute one of the characteristic features of a Campidano village, and the traveler is quick to notice them, as well as the almost complete absence of windows, which makes the street look solitary and gloomy.

In an open space, usually on the outskirts of a village, is the *noria*, on a circular stone platform, where a patient, blindfolded ass goes round and round, yoked to the wooden bar which turns the water wheel. Earthenware buckets are attached to a rope belt which revolves around its rim. The buckets, which go down into a cistern or well, overturn as soon as they reach the top of the device, pouring the water into a trough, whence it is led to a large reservoir to be used when the garden needs watering.

This device, so frequently found in Spain, is called by the Campidano villagers *su mulina* (the mill).

There is something oriental in the disposition of the village houses, streets, and gardens. From behind the high walls which shut in the streets, one often sees the waving tops of luxuriant palms, which suggest enchanting gardens and hidden flower-beds. This suggestion of concealed beauty is strengthened if the passerby catches glimpses of the inside of the compound through the small door in the *portali* when it happens to beajar.

THE "LOLLA" IS THE PRIDE OF THE CAMPIDANO HOUSEWIFE

On passing the threshold, one finds himself in an ample courtyard, which in most houses is divided into two parts. On the western side, where the sun shines nearly all day, is a kind of veranda, upon which open the doors of the various rooms of the house. The veranda is decked with most beautiful flowers, cultivated in earthen pots. In front of the veranda is usually a small garden, where oranges, palms, and a variety of fruit-bearing trees grow luxuriantly. This porch, or veranda, is called *sa lolla.*

The lolla, with the open space in front, is a modification of the Spanish *patio,* and the same name is used in the dialect of the Northern Province to indicate the open space before a country house. The lolla is the pride of every Campidano housewife, whose passion it is that everything shall be neat and beautiful.

In a small room is the millstone, for every household has its own gristmill, turned by a patient little ass which is blindfolded to prevent dizziness. The enclosure is so small that there is scarcely enough room for the maidservant to watch the industrious animal and inspire
A VILLAGE BEAUTY AT THE FOOT OF THE BRUNCU SPINA

This gorgeous costume of Aritzo is mostly of red coarse-woven wool. The trimming is green and blue and yellow, with silver braid on the shoulder, and the rich headcloth or scarf is of green and gold silk. The round-bottom apron is distinctive of the Barbagia region. From Aritzo one can climb the highest peak of the Gennargentu Mountains, which commands a superb view of sea and mountainous land.
MEN OF THE DORGALI NEIGHBORHOOD ON THE EAST COAST OF SARDINIA

Their handsome costumes are set off by the rough *mastraca* of black lamb’s wool with pockets of hand-tooled leather in artistic designs. The native costumes are slowly giving way to cheaper and less distinctive garments.
MAKING FLOUR IN A SARDINIAN HOME

After the wheat has been ground in the donkey mill it is screened through sieves of cane splints into large palm-leaf baskets. Then it is passed through silk bolting-cloth sieves to obtain flour fine enough for the unleavened bread which is baked in mud ovens.
A YOUNG MERCHANT OF IGLESIAS

This little girl wears the every-day costume of her mining district. She has come to the vegetable market with her mother and grandmother, and is selecting some of the shiny purple melanzane to offer her customers.
A SARDINIAN WOMAN OF DESULO

Some Sardinians believe there was, generations ago, an admixture of Arab blood in these people whose village stands on the western slope of the Monti del Gennargentu. They have beautiful clear eyes, finely cut features and a proud bearing.
THE CASTLE OF BURGOS IN NORTHERN SARDINIA

The village of Burgos is in a picturesque spot below the ruins of a twelfth-century castle built on the granite peak of a detached hill overlooking the Tino valley. The original Spanish colony consisted of only twenty-five families, but some of their customs have persisted to the present day.
A VILLAGE HARDWARE STORE IN SARDINIA.

The shops in the mountain villages of Sardinia display a variety of cheap household utensils. These are bought in pieces at a time by the poorer peasants to grace the walls of their homes when not in use in the fireplaces.
THE LEVEL GAZE OF A WOMAN OF DESULO

From childhood the women wear the distinctive costume of their village, and even the babies have the same bright colors. The peculiar tones of reds and blues in these costumes are typically Sardinian.
AN OLD SARDINIAN IN THE ISLAND'S CHIEF MINING DISTRICT

In Iglesias, a town of 10,000 inhabitants and the center of the Iglesiente, where lead and zinc are mined, the men wear their beretta, or long cap, a little shorter than do those of some other regions. Almost the entire costume is of heavy wool, the vest being fastened with large square silver buttons of antique design.
A MEDITERRANEAN PASTORAL SCENE

Sardinian peasants make excellent use of their natural resources. This flax straw lay in the stream for five days until the white fiber swelled. Now the bundles are being dried and taken on mule-back to the farmhouses, where the women will weave it into fine white linen.
MONDAY MORNING AT THE MUNICIPAL WASHING PLACE IN BURGOS

Wash-day in the Sardinian mountains presents an animated scene with rows of peasant women in bright costumes working on each side of a long trough. In the background are black kettles over open fires to heat the water.
BRINGING MOUNTAIN WATER FROM THE FOUNTAIN

This daughter of Aritzio is returning with a full water-jar balanced on the cloth which is coiled upon her head. Her features suggest Arab ancestry. Her eyes are those of her sisters of Mount Lebanon.
TWO OLD CRONIES OF IGLESIAS

In spite of their somber costumes, relieved only by the glint of antique silver buttons, these two old city fathers, joking in the market place, resemble twin Punches relating their adventures with their respective Judies.
THREE OF THE FAMOUS COSTUMES OF OSILIO

On each side are the gala costumes worn on Sundays and fête days in Osilio. They are considered the most beautiful of northern Sardinia. The grandmother has on the dress which is ordinarily worn by old women throughout the island.
A SARDINIAN GRANDFATHER

One knows it's summertime because he wears his lambskin maturica with the hair inside as a protection against malaria. There is a bite to eat in the end of his beretta, the long Sardinian cap which is worn the year round. This genial farmer lives in Macomer, a junction point where trains from four directions meet and spend the night.

XV
PEASANTS OF THE CAMPIDANO AT THE FIESTA OF SANTA GRECA

The father has just bought a suckling pig at the butcher's little grass hut, and the family is pleased in the anticipation of the roast before the camp fire. This fiesta is held in Decimomannu, whence a branch railway runs to Iglesias and the west coast.
him with a short rod when he stops (see illustration, page 22).

The flour thus ground is screened through sieves made at home by the women of the household (see Color Plate III). This operation is often performed in the middle of the courtyard. The bran is stored to feed the fowls, which are invariably found either here and there in front of the lolla or perched upon the cart shaft, which they use as a roost.

The contrast between the lolla full of flowers, with every comfort of modern life, elegant in appearance, and lighted during the night by electric lamps, and the other part of the courtyard, with its rural aspect, is both striking and interesting.

The lollas of the Campidano are not always the fine verandas just described. In the houses of poor families the portico is primitive, with a battered, slovenly tiled roof, supported by rough wooden posts, which are sometimes replaced by pillars of masonry. Other lollas have no gardens in front; but always one finds flowers or a climbing plant, adding color to the yall of the house. Everywhere are evidences of the good housewife's efforts to beautify her lolla as best she can.

THE MOTOR CAR VERSUS THE OXCART

The courtyard of a Campidano home is always cluttered with quaint Sardinian carts, with their frames formed of long poles.

The oxcart is still to be found on all Sardinian roads, in strange contrast with the speedy motor car, to which the slow Sardinian vehicle is often a serious hindrance, for the cart is usually loaded with fagots piled to an incredible height and spread so wide that the road is completely blocked. It is often quite useless to sound the horn. No one hears. The driver of the cart sleeps and the oxen, too.

When, after a great amount of hollowing, sounding of the horn, and shouting, the cart moves slowly aside, the motor car is rudely brushed by the bristling ends of the fagots.

The roads of Sardinia, once deserted and silent, are now traversed by many motor busses. Nowadays every part of the island is easily reached in a public automobile, but the old-time cart is always there also. It moves slowly and takes days to reach a village, but now and then it avenges itself on its modern enemy, the automobile. The engine gets out of order, a spring is broken, or the magneto does not work and a ferocious sun shines over all the scene. Then the Sardinian cart takes in tow its dejected and humiliated enemy and the passengers gaze morosely at the scenery, knowing that the village is distant and that on country roads are neither inns nor hotels.

In the central regions of the island the cart is smaller and has wheels of solid wood. It is just such a vehicle as was used by the Romans twenty centuries ago (see page 55).

NO WINDOWS LOOK UPON THE STREET

The house of the Campidano is almost always the one-storied building so common in Spanish countries. No windows look upon the street, a condition said to be due to the fact that in former days men were so jealous of their women that nobody would expose his wife or sister to the curious glances of strangers.

This reserve and all these efforts to conceal the business of the household are so common in Anglo-Saxon life that readers will not understand how it could be otherwise. Yet life in the southern part of Europe is so open to inspection that this characteristic of the villages of the Campidano deserves notice.

The heroines in Mrs. Deledda's works are rude types, all flesh and blood, with strong passions, often unchecked by education or religion. She describes the women of that small portion of the island which is called the Nuorese. In the Campidano nothing of the sort is to be found in the beautiful, quiet, open faces of the women, whose cares are all directed to bringing up a family—women who have in their eyes the reflection of the broad green plains of their beloved Campidano and whose bucolic souls are free from any dangerous passion.

In their lollas, full of sunshine and flowers, they superintend the household. Their men cultivate the fields and tend large tracts of vineyards, coming home at sunset. The large gate is opened wide to admit the cart loaded with casks of wine or bags of corn. Then the ample courtyard with its lolla is inclosed again and the happy domestic life continues in the sanctuary of the family.
A visit, however short, to the villages situated in the northern part of Sardinia and a hurried glance at a Campidano house are sufficient to reveal the great difference which exists between the northern and southern parts of the island.

A POTTIER IN ORISTANO, WHERE VESSELS ARE MADE TO SUPPLY ALL SARDINIA

The wheel is turned with the bare foot. The potter is attaching a double handle to a drinking jug for field use.

SARDINIA PROVIDES MANY CHANGES OF SCENE IN SMALL SPACE

As soon as one quits the plain and ascends the first hills, the appearance of nature suddenly changes, and before reaching the highest summits of the Sardinian mountains, one has passed through so many diverse regions, has admired such variety of scene, has been charmed by so many different costumes, that he gets the impression of having made a very long journey.

Here is Gallura, with its granite peaks and cork trees, of which entire forests cover the mountain slopes, with villages overawed by rocks which seem about to tumble down on them at any moment. There is Aggius, with its long range of saw-tooth peaks; Tempio, with its houses made of granite, giving the town an appearance unique in Sardinia; Nuoro, which combines the comforts of modern civilization with the opportunity to inspect Sardinia's ancient customs.

Then the mountain landscapes, with their incredible contrast of colors! Rude valleys and lovely glens, orchards and gardens, and long tracts of tuncas (inclosures), limited by fence walls in the northern regions and by cactus hedges in the south, all covered with asphodel and
PREPARING GOAT-MILK CHEESE

This cheese of Macomer has aged for five months, May to September, and after two or three more workings and the addition of olive oil and other ingredients, it will be ready for market in the winter.

INTERIOR OF A CHEESE SHOP

Here the cheese lover may find all varieties of Sardinian cheese. The smell is terrific and some of the wares on the shelves seem as if they might have attained a ripe old age before Columbus set out on his famous voyage.
NOT GIGANTIC CHESTNUT BURRS, BUT HEDGEHOGS

These queer-looking little creatures, resembling balls of spines, live in holes in the ground in the mountains of Sardinia. They are sometimes kept as pets, but more often caught and sold as a delicacy in the markets.

ON THE LINE IN SARDINIA

Countless numbers of white-breasted swallows build their nests under the eaves and window ledges of the rock houses in the hill towns of the island. This flock of feathered speedsters is resting from a frolic in the sky.
TRANSPORTING BAMBOO MATS

These mats are made of the split poles of bamboo, which grows throughout the island in the low places. The peasants use the mats as coverings for carts, and in the home the cylinders serve as containers for storing grain.

SARDINIAN PEASANTS COMING INTO MACOMER

As the horse is trained to carry double, the women ride behind the men. The saddles are works of art in leather of various colors, ornamented with bone buttons and pockets. There is always a little foot-board on the side for the riders’ feet.
ARITZO PEASANTS PLAYING THE SOUTHERN ITALY GAME OF "MORRA"

The players try to guess the number of fingers held out at the instant the hand is thrown forward. It is a favorite game in the drinking places and at fêtes, but is prohibited in some cities in Italy on account of the quarrels which result.

aromatic herbs, with flocks of goats pasturing on barren slopes.

Then there are Oliena, with the resplendent costumes of its inhabitants, and Fonni and Orgosolo and Desulo, the sad village lost in the solitude of woods, where dwell the most beautiful women in Sardinia, all dressed in red, a color which becomes a mass of flame when a procession of praying women is projected against the intense green of the chestnut woods.

In the district called Ogliasta are Lanusei, Arzana and Villagrande, villages which command extensive and magnificent views—a series of hills towering one beyond the other as far as the sea which washes the shore of Tortoli.

On the western side is the marshy district of Oristano, so powerful and important when Eleonora d’Arborea reigned, and near at hand Cabras, a village situated on the shore of a large pool, rich in fisheries, but unhealthy, where, in the summer months, malaria kills many of the inhabitants.

The villages in this part of Sardinia are almost all in miserable condition, for the delta of the Tirso is very unhealthy. But when the great irrigation works are finished its course will be better regulated, and it is believed that dread malaria will disappear.

There one sees pale girls, with fevered eyes as black as a raven’s wing. They are barefooted and wear a colorless costume as somber as their countenances.

Even the peculiar head-dress, which consists of a bright yellow kerchief tied under the chin, serves but to render the faces more sad and pale. What a difference between them and the pink-cheeked, blue-eyed, black-haired girls of the mountain district! Yet both are daughters of the same land.

BREAD-MAKING IS AN IMPORTANT OPERATION

One of the most important operations in Sardinian villages is making bread, for it is the chief food of the peasants.
When they have to work in fields distant from their homes, they carry with them enough bread to last a week. Once a week every Sardinian housewife is busy making bread, and until late at night she is superintending the maidservants, who display the utmost activity in the performance of this domestic duty and are helped by every member of the family.

The oven must be heated, ingots heaped close at hand, and the fire carefully regulated, for as the quantity must last a week it must be well prepared in order that it may not become stale. From village to village the shape in which bread is fashioned varies considerably, and even its composition presents slight differences.

The kneading of the flour is conducted in the kitchen, often in large earthenware bowls, but it is finished on a table so short-legged that it compels the operator to kneel before it. The dough is rolled very thin. When baked and cooled, it becomes so hard and brittle that it cannot be broken without crumbling into innumerable bits (see pages 22, 23, and 24).
In the summer time the women and children of the Iglesias district go entirely barefoot or wear a rough plank of wood attached to the foot by a broad band of elastic across the toes. When walking in the streets of the villages, these sandals make a peculiar clacking noise on the stones.

This bread, having little yeast in it, lacks the flavor of the fermented variety, and has different names. In northern Sardinia it is called carta di musica (paper to write music on). In Barbagia, as at Desulo, Aritzo, and Sorgono, they call it pillonca (see page 25).

In autumn, flies are a great nuisance in Sardinia. They cover every inch of the kitchen tables and every particle of food. In the Campidano houses, whose main features are cleanliness and order, these winged pests have relentless enemies in the housewives, who employ all means to banish them; but in the villages situated in the center of the island, where cleanliness is not at all in accord with the beauty of the scenery, the tourist unaccustomed to such sights becomes terrified and swears never to taste such bread, remembering his lessons in hygiene. He wonders how the people live and thrive.

Fortunately, the fire which burns briskly inside the oven destroys the germs. The aromatic shrubs by which it is fed send out a smoke which has a distinctive odor. Instead of escaping through the chimney, it often oozes out between the weathered tiles of the roofs. The whole village reeks with smoke, which tells the visitor that it is baking day.

**Curiosity is a Characteristic of the Islanders**

In the villages the people are rather inquisitive. They gather around the tourist and ply him with questions, seeking to know everything about his errands. At Desulo particularly the women are extremely curious. "Why did you come?" "Are you single or married?" "Where do you intend to go?" Such questions every visitor must answer if he desires peace.

If he carries a camera, the affair becomes even more serious. Children, as numerous as flies, collect around the unhappy man, and are so bold as to thrust themselves even between the legs of the camera tripod. Each wants his picture taken, and has uncanny ability in finding the very spot where he is not wanted.
HOW THE WORLD MOVES ON SAN PIETRO ISLAND

In some mountain districts of the interior and on the island of San Pietro the small cart with solid wood wheels is still in use, exactly as in the time of the Roman supremacy. The wheels are tight on the axle, which revolves underneath the cart in hardwood blocks (see p. 47).

When, at last, everything is ready and the shutter is about to be released, a boy who has succeeded thus far in escaping attention comes up and peeps into the lens. So goes another film!

Whoever carries a camera is often asked, “How much do you charge for a portrait?” It is rather difficult to make the people understand one’s reasons for taking photographs. Pretty girls often object to posing before a camera, for fear that their likenesses will appear on a picture post-card—a thing which they abhor above everything else.

They are Eve’s daughters, however. When asked to pose, they pretend to be shy, and giggle and cover their faces with aprons, and say that by no means will they allow any one to take their picture. But they do not stir; they do not run away. The ending is almost sure to be a happy one for the zealous photographer.

CLOTH MADE AT HOME FOR PEASANT COSTUMES

In the mountain districts in the heart of Sardinia and in some of the northern villages—Osilo, for instance—the cloth of which the peasant costumes are made is woven at home. The spinning is done by women whose parchment skin, sunken eyes, and protuberant cheek-bones suggest a grotesque mask.

The warp is stretched on the ground in open spaces to prepare it for the loom, at which women and girls work all day, singing their melancholy songs to the accompaniment of the click-clack of the sley, which forces the weft into place.

One variety of fabric so woven is called orbach. From a modern point of view it lacks smartness, for it is rather rough and hairy, but it is so strong and so nearly waterproof that officers of the Italian navy, sailors, and sportsmen buy a great deal of it for suits and overcoats.

For women’s dresses, the cloth is dyed black, scarlet, or dark red. The peasants use vegetable dyes extracted from the juice of certain berries, and neither rain nor sun can fade the colors. German chemists often studied the plants from which these dyes are taken. In vain they urged the Sardinian women to use the
MOST OF THE TRAVELING IN SARDINIA IS DONE ON HORSEBACK

The saddlebags, or bisaccia, made of coarse wool, are as much a part of the horseman’s equipment as is the saddle itself. In the background rises one of the nuraghi, those prehistoric ruins which dot the island (see text, page 17).

bright aniline dyes. Some villages experimented with them, but they proved a failure. The contrasts were unpleasing, the tints too bright; the whole effect was inartistic.

Carpets and Saddlebags Are Picturesque

From varicolored wool the Sardinian women weave carpets and saddlebags which are truly wonderful, both for variety of pattern and harmonious combination of colors.

The sense of art in these uncultured people makes a modern painter wonder how women who live so far from any recognized art center succeed in originating such pleasing designs. From generation to generation a natural taste has been handed down by these modest people, who embroider their skirts and bodices and make such splendid carpets that no trained artist could do better.

From June to October the Sardinian calendar contains many festivals. Saints, both male and female, are held in high esteem, but religion is more the occasion than the cause for releasing the flood of music, pageantry, and rivalry. The Spaniards are largely responsible for this trait of Sardinian character.

Whole families of peasants think of the feast two or three months in advance. They hoard every penny and endure great want with the sole aim of spending in one happy day what they have accumulated during weeks of glad discomfort. They travel from distant places in carts covered with tunnel-like awnings and drawn by bullocks or horses.

Furnishings of a Peasant Cart

The furnishings are simple. A pair of homemade chairs are securely fastened to the sides of the cart for the mistress and any other important personage of the household. The others accommodate themselves as they can on mattress or cushions. The cart is cluttered with household treasures: saddlebags filled with cheeses, bread, potatoes, lambs or kids ready-slaughtered but not yet skinned, caldrons, earthen cooking pots, and children of all ages and complexions, not to
THE WATER-SUPPLY SYSTEM OF SASSARI

At the foot of a hill below the market, in the eastern section of Sassari, is the ever-flowing Fontana Del Rosello, the water of which is carried up to the city in barrels on the backs of donkeys. The baroque fountain dates from 1605 and is crowned by an equestrian statue of St. Gavinus, tutelary saint of the north part of the island, who is said to have been a Roman centurion before his conversion to Christianity (see text, page 29).

mention a lean, underfed car which is compelled to trot under the cart, to the shaft of which the poor animal is tied by a short rope.

Sometimes the cart is so full that there is no room for the driver, who is compelled to sit on one of the shafts and from there guide the unhappy horse.

No springs deaden the violent jolts which bad roads impart to the vehicle; but the enthusiasm of the travelers is not at all abated by the uncomfortably crowded cart, and the party finally arrives at the spot where the feast is to take place, a little out of breath from the continuous shaking, but in the best of spirits and eager for all the diversions the feast may offer.

THE WIFE WORSHIPS FOR THE FAMILY

Religious duties must not be overlooked. Wax candles are devotedly taken to the church and placed before the shrine by the housewives, who remain all the morning on their knees before the picture or the statue of the saint, while the rest of the party is busy preparing dinner.
STACKS OF CORK-OAK BARK AT AGGIUS

The gathering and export of this bark forms one of the principal industries of the northern region (see text, page 75).

MAKING CORKS

Formerly corks for bottles were laboriously pared by hand, a dangerous process. To-day they are made by machines which whirl the square blocks of cork around a stationary knife.
MAKING READY FOR HER PRESSING

A familiar sight in Sardinian villages is the housewife seated at the door of her home with her large sad-iron. She fans the charcoal into life to heat the iron.

TENDING THE OVEN IN A DESULO COTTAGE

Dry mountain underbrush is used as fuel in these ovens of mud. Long spits of mutton are roasted in them for the wedding feasts, which sometimes last for several days.
AN AL FRESCO TUB

Among the poor in the cities the children are always dirty. When on a hot day enough water can be had, the baby's bath is a very public affair, much enjoyed by neighbors and passers-by.
PEASANTS CAMPED IN THE DRY BED OF A STREAM AT DECIMOMANNU DURING THE FESTIVAL OF SANTA GRECA
AT THE ANNUAL FÊTE OF SANTA GRECA

The peasant families come to Decimomannu in their carts and stay two or three days. They camp near the town and roast pork and mutton by their camp-fires. An accordion or other musical instrument is as indispensable as the cooking utensils.

A BARBAGIA MOUNTAIN WEDDING FEAST AT DESULO

The celebration lasts for several days and includes a feast for all the friends of the bride and bridegroom. The wine flows freely and the festivities continue far into the night.
PART OF THIS PEASANT JOCKEY'S HABIT BELONGS TO HIS SWEETHEART

Sometimes there are horse-races during the festivals in the hill villages. The riders dress in queer costumes and their mounts wear fancy bridles and surcingles. This particular horseman thinks his apparel will bring him good luck.

WOMEN AND CHILDREN IN THE COSTUME OF DESULO. (SEE ALSO COLOR PLATES V AND VIII)

Made in the home, of coarsely woven mountain wool, this costume owes its color to a fruit and vegetable dye the secret of which was sought by German experts before the World War.
THRESHING WHEAT (SEE ALSO COLOR PLATE X)

The grain is shelled from the head by the steel-shod hoofs of the oxen as they pass many times over the straw. Afterwards the straw and chaff are tossed in the air with forks, and the wind winnows the wheat.

AFTER THRESHING THE STRAW IS BALED

Sometimes the straw is piled in this fashion on the plains near the railway stations, to await shipment during the winter months.
A BUSY MONDAY MORNING SCENE NEAR PORTO TORRES, NORTHERN SARDINIA

As there is no water piped into the home, this brook is a blessing to the housewives, who bring their washing here, balanced on their heads in large tin cans. The clothes after being washed are spread on bushes to dry in the hot sun.

SARDINIA HAS HER CAMP-FIRE GIRLS AND GIRL SCOUTS

These two organizations in Cagliari are under the instruction of women physical directors of the public-school system.
LITTLE WOMEN OF OLIENA

Dressed in the same costumes as the older women, these girls seem never to have had a childhood. They were very shy and solemn, for this was the first time they had ever been photographed.

All the cooking operations are performed in the open air. A fire is made and long wooden spits on which entire kids are put to roast are turned between two stones before the fire. This method is called furria, furria (turn and turn) and Sardinians employ it to perfection.

Casks of wine are put in the shade. Cheese, bread, and vegetables are taken out of the bags, and when, at noon, mass is over and the procession has taken the saint back to the church, the banqueting begins and great merriment reigns.

After dinner the music begins. The accordion is in great demand and so is the launedda, a kind of pipe especially common in southern Sardinia. Songs are heard everywhere. In the late afternoon the people get ready for the dance.

The festivals, which generally take place in small churches situated at a little distance from the village, are more or less picturesque, according to the costumes worn by the men and women and the beauty of the surrounding scenery. They offer a capital opportunity for studying the customs and habits of the people. It is a pity that such feasts occur in a season which is not really favorable for the tourist.

HOW THE SARDINIANS DANCE

In the Ballo Tondo or Duru Duru the dancing partners join hands in a circle and wind to the left with a step rather difficult to describe and equally difficult for a novice to perform. This dance is but a memory of long-forgotten rites, when Baal and Astarte were the popular gods. The dancers hold their bodies erect, their countenances are stern, and the feet move continuously, advancing or receding with little leaps and bounds, all performed on tiptoe.

Now and then, when the dance has reached the utmost excitement, the male partners suddenly break out into wild shouts, but soon silence reigns again. The
ladies dance with grave demeanor, with lowered eyes and modest mien. Any one may join the dance, but the newcomer must be careful not to break the circle to the right of a male dancer, as it is considered a serious offence to separate a couple. That is logical enough. When a young man invites a girl to dance he offers her his right hand, and in so doing chooses her as his partner.

A FESTIVAL DATING FROM 16TH CENTURY PLAGUE

In the two most important towns of Sardinia, where civilization has had the deepest influence, some old religious festivals have survived, and though they have lost much of their primitive splendor they are still popular. At Sassari, on the 14th of every August, a great procession takes place which has not a wholly sacred character, but is a compromise between a religious procession and an English pageant.

After the terrible plague which destroyed so many inhabitants in 1582, the people made a solemn vow to carry in procession a certain number of huge wax candles, to be placed, all lighted, around the statue of the Madonna di Mezz Agosto (Middle of August); but as such tapers proved expensive, the people sought a cheaper substitute. Accordingly, wooden candlesticks were made, and to these are fastened banners of different colors and patterns, the whole ornamented with tinfoil and tinsel.

Every corporation and trade union has its own candle, manifesting a certain pride in decking it. The various members who follow it in the procession hold large silk ribbons attached to the capital of the column, and while the candlestick, carried by the stoutest and strongest porters to be found in Sassari, goes down the main street, the members who have wrapped upon their arms yards and yards of gorgeously colored ribbons slowly let them out to their greatest length.

It is a very beautiful sight to see all these silk ribbons glittering in the last rays of sunset and waving in fanciful evolutions, as those who hold them in
A CITY BRIDE AND BRIDEGROOM COMING FROM CHURCH

The duration of the ceremony is seldom more than five minutes.

their hands advance or recede. No priests are in the procession. At the rear walks the mayor of the town, surrounded by the council members and protected from the pushing of the eager crowd by the municipal guards in full-dress uniform.

Most of the corporation members wear quaint old Spanish costumes and the whole procession is enlivened by the sound of small drums, beaten frantically and continuously while the pageant lasts; and by the sharp notes of flutes, which play a tune so gay that it makes the stout porters unconsciously assume a gait which has all the rhythm of a ballet. When the procession finally reaches Saint Mary's Church the candlesticks are placed around the statue of the Madonna and the feast is over.

Another religious festival, the most renowned and characteristic of all, is the festa of S. Efisio, the patron saint of the Province of Cagliari.

The ceremony takes the form of a procession to and from Pula, a village situated on the south side of the Gulf of Cagliari, where, according to legend, the saint is believed to have suffered martyrdom. The image of the saint, an ugly, garishly colored wooden statue shiny with varnish, is carried in a coach all paint and gilt, drawn by a team of oxen whose long horns are covered with nosegays and whose necks are decked with banners of rich brocade.

The procession is escorted by a cavalcade in the costumes of the ancient militia, and the coach is preceded by musicians playing launeddas. The ceremony takes place on the first of May and the saint comes back to Cagliari after sunset on the fourth.
Great efforts are being made to maintain these festivals unaltered, but the concourse of visitors from all parts of the island is not so great as it was some years ago. The once keen enthusiasm for these ancient customs, which are but a relic of the Spanish rule in Sardinia, has become lukewarm.

FEW HOTELS OR INNS

In a land that does not possess many hotels or inns, the system of receiving travelers is more than a custom; it is almost a law. Hospitality is one of the strongest traits of the Sardinians. A stranger is always received with the utmost cordiality and sociability, everybody being anxious to do something to help him. Accustomed as the Sardinians are to solitude and silence, they fear that a person may feel too deeply the loneliness of traveling unknown in a country where villages are so far apart.

Sardinian hospitality has always been spoken of in the highest terms by authors and travelers. It has come down to us unchanged from the old Roman days, when the shrine of Jupiter Hospitalis was erected in every village and palace in the island.

THE GUEST, A SACRED PERSON, IS FORBIDDEN TO PAY

If you happen to reach a village on a feast day, you are never left alone. Somebody is sure to come and invite you to enter his house, to sit at his table, and to partake of his dinner. If you have a letter of introduction for some influential person of the place, you will receive an almost regal reception.

A foreigner who is unaccustomed to such treatment is reluctant to accept an invitation so freely offered. He wants to pay for every assistance he receives, but he cannot. He is forbidden, for the guest, as in the days gone by, is considered a sacred person, and even in towns where life is much the same as in any other part of the world, this sense of hospitality is not completely lost, but is made manifest in a thousand ways.

In some villages an inn, or something resembling an inn, is managed by a person who in most cases is not a native of
the place. In such places a stranger is sometimes overcharged, though of course only from a Sardinian point of view. Perhaps they charge too much for the food they furnish; but one must consider that guests are so rare and expenses so heavy that the business is not a profitable one. If tourists and merchants would visit these places more frequently, inns and hotels would provide more of the comforts of modern life. But on this subject prospective visitors must not be deceived. Accommodations in Sardinian inns are not good, and in the whole island there are but few hotels.

Unless one is willing to sit at a low table in a room full of smoke, eat roast pig and rough bread and cheese from the island. In Nuoro the women and girls retain the old fashions unaltered. At Oliena, Fonni, Desulo, and Aritzo the costumes vary greatly both in colors and pattern; but, sad to say, Sardinian costumes are rapidly disappearing. Everybody is anxious to dress in modern style. Young peasants have already put aside the male attire of former days and only the old villagers have any attachment for the costumes of their forefathers.

The costume of the women of Quarto Sant' Elena is described in every guide-book, but in vain would a visitor go to that large village in search of one. Only five or six specimens now exist and they are jealously kept in the bottoms of family chests, as souvenirs of a colorful past.
In Cagliari, for months and months no woman or man wearing a distinctive native costume is to be seen. Now and then, for some fancy ball or similar event, the elegant young ladies of Cagliari borrow costumes for a few days and wear them through the streets. Everybody turns and looks with admiration at the unusual sight, to the amazement of foreigners, who, on coming to Sardinia expect to find everyone in gay attire.

Artists and archeologists are thinking of founding in Cagliari an ethnographic museum containing specimens of the costumes of the various districts of Sardinia. Funds are already being raised for that purpose (see Color Plates I to XVI).

COSTUMES NOW TOO EXPENSIVE FOR PEASANT BRIDES

Although costumes are a sort of family heirloom handed down from mother to daughter, they do not last forever. A modern bride cannot afford to have one made for her. Since the war the prices of brocade and silk have increased four or five fold and so have jewels. How can a peasant girl of Osilo, about to be married, afford $800 for a complete festival costume? She must content herself with a dress which, being designed after her own fancy, has lost the best features of the primitive costume.

Moreover, the farmers and rich peasants in the villages are wont to send their sons and daughters to the nearest town to attend secondary schools. When the boys and girls return home they will no longer wear native costumes, but want to be dressed in the latest European fashion. In Sardinian villages, even in the interior, you often see a mother, dressed in the most beautiful and gorgeous costume imaginable, walking beside her daughter, who is dressed according to the dernière mode of Paris.

Sometimes the daughter compels her mother to lay aside the fine old costumes and put on modern dress. The unhappy woman, not being accustomed to wear such inartistic modern hats, looks so awkward and embarrassed that she is very often laughed at and scorned by the townspeople and called a country cousin.

Authors have a lamentable fault—that of flattery through imitation. They are too often disposed to copy one another.

A REAR VIEW OF THE OSILO COSTUME

The headpiece is of red silk, with top and band of white silk embroidered in multi-colored flower patterns, beneath which a fine white veil is worn. The skirt is of plaited scarlet silk, with a wide embroidered band at the bottom.
A STRIKING EXAMPLE OF SARDINIAN ART IN SCULPTURE

Sardinian monuments are usually of little interest, but this one to Quintino Sella, the pioneer miner, which stands in the Piazza Sella at Iglesias, is strikingly beautiful in its contrast of white marble and the black volcanic rock of the region.

The wisdom of a past generation too frequently appears under new but inadequate disguise. Instead of describing what one sees and feels, which would be best, one is unconsciouslly tempted before visiting a place to read what some earlier visitor has said and felt about the same place, and thus pour fresh impressions into old molds.

Often authors come to Sardinia in a hurry, hire a motor car, run through the country at a speed of 30 miles an hour, and after a few days go back to the Continent and write a book about what they have seen. When they perceive that they have neglected an interesting place or missed a useful fact, they paraphrase what previous authors have written. Misstatements about Sardinia are therefore so numerous that they would, and do, fill many a book.

A legend too strongly rooted still persists about Sardinia as a land which cannot be conceived without its shepherds, wearing goatskin mantles; its large inclosures decked with asphodel; its women all dressed in the most gorgeous costumes, dancing and singing all the day long, and banditti at every house corner.

Many of these things still exist, but to discover them one must go to the interior of the island, in places situated far from the railways and highways.

IGLESIAS DISTRICT RICH IN MINES

A visit to Iglesias is interesting. The visitor finds himself in a Sardinia of which he has read nothing. Tall chimneys streak the sky with smoke, machinery of all kinds makes the valleys echo with noise. The country is crossed by electric wires fixed to high iron towers, the main roads are traversed by a great number of modern vehicles, and in this district the old Sardinian cart is seldom seen.

This is industrial Sardinia, so little known abroad, which will have a great expansion when the reservoir of the Tirso is formed and electric current provided at a cheap price.

Cagliari has all the appearance of a
AN EXCEPTIONAL BLOND TYPE OF ISLAND MAID

Although she lives in a village in a barren mountain region of Sardinia, she is not unlike an American in features, dress, and actions.
modern continental city of the size of Pisa. Near the harbor, studded with steamers and sailing ships, a long, wide street lined with palaces looking out upon the sea, leads from the station to the Basilica of Buonaria. Upon this street open two broad thoroughfares, which, with a steep ascent, lead to the upper quarters (see illustration, page 2).

The town boasts terraces which command extensive and magnificent views. Whoever has walked for a while on the Bastione San Remy has received an indelible impression. From this elevated concourse the view of sea and land, of pools and meadows, is such that to live in Cagliari is to live upon a mountainside, perpetually refreshed by the exhilarating environment of space.

The town has monuments, elegant shops, theaters, bars, and clubs, a good school system, a university, and a public library.

During the summer months the favorite resort of Cagliari is a wonderful beach, with commodious bathing establishments. One part of it is called the Lido, in imitation of the celebrated Venetian strand, and many say that comparison is favorable to the Sardinian shores.

In Cagliari a visitor is always interested in the medieval monuments. Its towers, built by the Pisans about 1300, are standing in a state of perfect preservation (see page 6), and the gates to the Castello quarter, as well as the Cathedral, are worth visiting. In the same quarter is an archeological museum, with a hall dedicated to pre-Roman history, presenting a picture of prehistoric Sardinia, with its nuraghi, domus de janas, and other relics of a hazy past.

CAGLIARI HAS MANY MODERN INDUSTRIAL PLANTS

The town has industries, but they are quite modern and, of course, no guidebooks mention them. There is the chocolate manufactory, a factory for making cement, and a porcelain industry which promises a splendid future because of the excellent raw material in which Sardinia is rich.

Sassari, in its new quarters, is clean and lovely, and continental people prefer living there because it has an atmosphere
comparable to that of the ordinary Italian town. This city also has industries, most important of which are tanneries that have already acquired renown in continental Italy and in France. From the olive groves surrounding the town the finest oil is produced and sold at high prices.

Tempio manufactures the products of its oak forests into cork (see illustrations, page 58), and in all Sardinia there is an awakening of industry and commerce which is encouraging.

Home industries are also thriving. At Bosa the women make very beautiful laces after old patterns, which are greatly appreciated not only in Sardinia but in Italy and abroad.

THE HOME OF SARDINIAN BASKETS

At Castel Sardo, in the Northern Province, and at Simai and Settimo in the South, the industry of basket-making is well advanced. The baskets made in Castel Sardo are the best and are sold as far away as Philadelphia. The leaves of a dwarf palm which grows in the wild flat plains of the north are used. Figures of animals and flowers fashioned from palm leaves which have been exposed to smoke in the kitchen for several months, so that they take on a permanent blackish hue, are cleverly woven into the pattern (see illustrations, pages 27 and 28).

At Isili, in the Province of Cagliari, fine carpets are woven on hand looms and sold everywhere. Sardinian artists are making every effort to keep unaltered the native designs of both carpets and baskets. They insist that the women continue to dye the former with the juice of wild berries, as in the past.

The major portion of Sardinia is mountainous, and these heights, once covered with forests, are now in the main barren and desolate. Continental speculators cut down the forests and converted the wood into charcoal, and the Italian Government and the Sardinians have been very slow to reforest the cut-over areas.

Only one-eighth of the land is under cultivation—a fact due, first, to the preponderance of hill over plain, and, second, to the lack of rain in summer months and a variability of climatic conditions which prevents sure harvests.

The cultivated ground is well tilled. Mechanical implements are commonly used, especially in the Campidano, and the old Sardinian handmade wooden plow is used only in the mountain districts, where the turf has but little depth.

The large reservoir of the Tirso and the projected reservoirs of the other rivers will supply the necessary water in the hot season and will be a boon for agriculture.

Of live stock, sheep and goats constitute the majority; but even among them, left as they are to pasture where Mother Nature has provided food, the mortality during a prolonged drought is very high and the loss of money considerable. When the season is favorable, stock breeding is profitable.

LACK OF MAN-POWER IS SARDINIA’S GREATEST HANDICAP

It has already been said that the main feature of a Sardinian landscape is its solitude. The whole population of the island is less than that of Naples. The few people are scattered over a large territory, with villages sometimes more than fifteen miles apart. Only Cagliari and its environs have a comparatively dense population.

This lack of man-power is seriously felt in every branch of human activity. The island’s population has been further diminished in recent years through losses on the battle-fields of the World War.

Much remains to be done, though much has already been accomplished. The petty jealousies kindled by the Pisani and maintained by the Piedmontese between the two provinces of Sassari and Cagliari have completely disappeared.

The Sardinians are now united in their efforts to improve their land. Especially since the World War they have put on the armor of pride and are conscious of their strength. They know the Americans, because they saw the Star-Spangled Banner floating everywhere, when representatives of the American Red Cross gave to Sardinia assistance of every kind. So, let the Americans now know the land of the nuraghi and learn to appreciate her.
BELVEDERE PALACE, THE FINEST IMPERIAL BUILDING IN VIENNA, DATING FROM 1713.

Prince Eugene of Savoy first occupied the Belvedere. Early in the 20th century it was fitted up for Archduke Francis Ferdinand, whose murder at Sarajevo kindled the fires of the World War. Recently it was used by the American Relief as a feeding station.
VIENNA—A CAPITAL WITHOUT A NATION

By Solita Solano

Author of "Constantinople Today," in the National Geographic Magazine

Bankrupt Vienna has nothing left except an incomparable geographical situation on the Danube. Until recently one of the richest and gayest cities on the Continent and the center of Europe's oldest empire, she is to-day the capital of a few mountains and rivers that occupy a small corner of her former dominions. The dissolution of an immense polyglot empire has brought ruin to Austria and put Vienna in pawn to the world.

On the edge of a shriveled little republic of six million insolvents, Vienna has been waiting for a rescue party and living on alms. While waiting, her currency has dropped until now it takes many thousand of her twenty-cent pieces to make one American dollar.

Surrounded by countries that are nursing ancient grudges against her, dependent on them for nearly all her food and fuel, and with only worthless money with which to pay her bills—this is the fate which has brought almost unparalleled national misery upon a highly civilized people in a famous center of learning, art, and culture.

Misfortune has not robbed Vienna of her beauty.

Despite her tragic atmosphere, Vienna is still a beautiful city, with the cosmopolitan charm of Paris. In area she can compete with London, for her limits embrace more than 105 square miles. The city, however, is not built up to its limits, but is surrounded by a belt of meadows and wooded hills known as the Wiener Wald, from which many of the beautiful trees have been cut down in the past three years of fuel shortage.

The Danube, which has given Vienna her important commercial position, divides into several arms after leaving the limestone hils above the city, and a picturesque winding canal diverts some of the water through the northwest part of the town to the warehouses, filled with foreign food for the hungry population.

No finer buildings can be found in Europe than in this city of the Hapsburgs. Several races labored at building Vienna for more than a thousand years, and the artistry of many peoples is represented here. The buildings are a record of the changing taste of western civilization.

The Ring-Strasse surrounds the Inner City

Baroque architecture, which came to grief in Rome and to perfection in Vienna, has many brilliant examples, particularly in the Inner City. This is the oldest part of Vienna and is inclosed by the famous Ring-Strasse, a boulevard 187 feet wide, with double rows of trees, and built, like the old boulevards of Paris, on the site of fortifications which once extended for three miles about the core of the city.

Within or on the Ring are the imperial palace buildings, the great Gothic cathedral of St. Stephen, the celebrated University, the Parliament building—that Greek temple where the National Assembly of the Republic now sits—the immense twin museums, the Exchange Building which is the city's pulse, the Opera and the Hofburg Theater, all in a setting of linden and horse-chestnut trees, which frame the boulevard and avenues and line the walks of Vienna's lovely parks.

Outside the confines of the Ring are many palaces, embassies, chateaux, museums, hotels, and handsome stone apartment-houses like those of Berlin.

In this splendid setting an economic upheaval has completely overturned every normal social condition and changed the destinies of all classes of the population.

The workman is now on top of the heap and will be provided for as long as the Social Democrats are able to make their governmental machine function.

Next down the new economic scale come the titled aristocracy and the other upper classes who used to live by "unearned increment." Many of these have spent their principal since the revolution and have come to bitter poverty.
Lowest on the scale is the middle class—the real tragedy of Vienna. Forming a fourth of the population and including the intelligentsia, this entire class, to whom the city in large measure owes its greatness, is beggared, hopeless, and apparently doomed to extinction.

The plight of this middle class is the last thing the traveler sees. If he is a casual person, who lives on surfaces, he may even leave the city with the impression that all is going well with the Viennese.

There is nothing in the hotel district on the Ring to indicate to him that here is a city that is running along on mere hope. He will be served plenty of good food. He will see many luxuries in the shop windows priced beyond his pocketbook. Opera tickets are unobtainable, he may find, unless he tips a hotel porter to stand in line at 7 o'clock in the morning.

Gay crowds that bet freely will surround him at the races. He will pass flower stands piled with roses of the American Beauty variety, and fruit vendors who have mounds of fieldhouse strawberries, larger by far than those sold in New York. He will see drab corners blazing with oranges, the first that have come to Vienna in eight years.

If he wishes to take tea at a smart café, he will have to get there early or he will find all the tables filled. Strolling about the Ring afterward, he will see scarcely a person who is not well dressed, well fed, and equipped with one of the large leather money satchels which the inflation of currency has made popular.

But all this is seen in the Vienna of the tourist, near the Ring. Dollars, pounds, francs, and lire keep the hotels and shops running at a profit. Here, too, come the exchange and war profiteers, known as the **schiebers**, who spend a former year's income for a dinner. They are dressed in expensive bad taste, diamonds glitter on every hand, and they shout for their waiter in low Viennese dialect and Galician jargon.

**IN VIENNA: MONEY SAVED IS MONEY LOST**

Crowds of shoppers and holiday-makers from Czechoslovakia and Jugoslovakia, across the borders, also come to the capital to convert their money into Austrian crowns and buy luxuries which they could not afford at home. They hate the city...
that formerly ruled them; but after all, it is their Paris and still sets the fashions.

Fringing the throng of foreigners, the Austrians can be seen on their periodic shopping trips, which coincide with payday. Money kept loses value automatically as the crown falls. Clothing and food are worth something concrete. Austrian money is without value.

For a long time those who wished to save bought dollars with crowns, which only had the effect of making the crown fall even faster, so that until recently the government restricted the sale of foreign currency and forbade the shops to ask for it. Nevertheless, foreigners were begged to pay in dollars instead of crowns, and many a lucky Viennese has a little roll of American dollar bills hoarded against the deluge.

If the traveler stays close to the Ring district he will think this part of Vienna is typical of the whole city. But let him go motoring near the outskirts and he will see armies of ragged women and children on the city’s dumping grounds combing the heaps of refuse for bits of food, metal, or glass. Families carrying two or three chickens under their arms take their fowls from spot to spot, setting them down to peck at any likely looking mound, while a child is sent ahead to prospect for another place with possibilities.

THE CITY IS SURROUNDED BY SMALL GARDENS

On the edge of the city the traveler will come upon curious little patches of gardens, each with a makeshift fence and a wooden building that looks like a child’s playhouse. Women and children are weeding and carrying water. They do not waste ground by having paths, but step carefully between the plants. Blocks of scarlet poppies, raised for their delicious seeds, dot the hillside.

The traveler is told that there is no end to these garden homes. They surround the city like a ragged girdle, and are the result of the housing famine that has driven thousands of families to live here in huts, even in cold weather, where they add to the city’s food supply by raising vegetables about the front door.

These are the Schreber Gardens, modeled after the famous ones of Berlin, and
THE COAL SHORTAGE IN VIENNA CAUSED THE DENUDING OF THIS FOREST

Sometimes they go five miles for such fagots. Large forests have been destroyed for fuel since the coal shortage (see text, page 102).
A VIENNESE FORAGING PARTY BACK FROM THE COUNTRY

In the packs of the foragers are potatoes, lard, pork, and perhaps a chicken or rabbit, obtained from farmers in exchange for bolts of cloth, scissors, shoes, etc. (see text, page 95).
Surrounding this square are the old War Offices, the old Civic Arsenal, the Fire Station, and the Church Am Hof. In the center rises a column of the Virgin, erected in 1658.
are all that save their owners from a diet of black bread and noodles every day in the year.

Each cluster of gardens has as a center a miniature delicatessen stand and an open-air beer hall, where men, women, and children refresh themselves after a hard day’s gardening.

THE VIENNESE STILL ENJOY THEIR HOLIDAY TRAMPS

But this is dissecting Vienna into its separate elements and ignoring the curious national psychology which animates all classes. The gaiety which has always characterized the soul of the Viennese has an elastic quality which has enabled them to survive the most extraordinary hardships and soul-racking times without depressing their bubbling spirits.

As long as a man has his old Tyrolean hiking costume of leather breeches and a feathered cap, and a woman her peasant’s costume, with its black bodice and red apron, they will pack raincoats, bread, and cheese into a knapsack, take their children by the hand, and start off for the country.

Every Sunday and holiday is spent in care-free tramping. Laughing and romping, the bare cupboard at home forgotten, they hike to the country, through sun or rain, to some favorite spot in the Wiener Wald.

At nightfall they turn back, entering the city as the opera and theater crowds are rushing to catch the last trams for the suburbs. Perhaps a bottle of wine has prepared them for their long walk back in the darkness and inspires them to shout and sing as they return to the scene of their eight years’ privations.

Their sufferings have left no deep or bitter impressions. Like irresponsible children, many seem to regard the aftermath of the war as hard punishment, after which they were sent to bed without any supper. But to-morrow surely they will be forgiven and the good old times of plenty will come back. No one will leave them to starve. America always feeds hungry countries. If not America, then some one else will provide.

LIVING ROOMS COMMANDEERED BY GOVERNMENT

The housing crisis in Vienna is the worst in history and is not yet solved, in spite of heroic efforts and city government control. All building activities having ceased during the war, the congestion was increased by war profiteers, who flocked to the capital from the provinces, followed by thousands of recalled Austrian officials.

To avoid riots, the city adopted forcible billeting, which still obtains. All dwellings, whether palaces or tenements, are listed by the Wohnungsamt and the number of rooms compared with the number of persons. After the comparison, all available space is commandeered.

Baronesses and wives of workingmen alike are forced to take in lodgers. No one may have an extra room while homeless thousands are sleeping in barracks, parks, and freight cars; nor may any one have a house in the city and another in the country. He must give up one and keep lodgers in the other.

One titled family that did not believe the Wohnungsamt was in earnest did not heed the warning, and returned to town one day to find that wagons had taken away their belongings and their home was filled with laborers.

PAYING FOR HOMES IN HOURS INSTEAD OF MONEY

The billeting regulations and the law that was passed at the beginning of the war to prevent the raising of rents may have spared Vienna from riots, but they ruined the landlords, many of whom are now receiving only a few cents a month from their property (at the present value of the crown), while their tenants’ incomes have increased many times.

In consequence, buildings are in bad condition and landlords are unable to make repairs; sometimes the tenants themselves club together to have a leaking roof mended. A landlord may not sell his property without a payment to the city of 55 per cent of the sale price.

Growing out of the housing shortage is the movement of the Land Settlement Societies, financed by funds from America and England, which has brought together 700,000 homeless of the middle and working classes throughout Austria. The settlers are building garden cities by cooperative labor, partly maintaining themselves by keeping pigs and poultry and raising vegetables. In payment they must give the Land Societies from 1,500

The father of this family is a woodcarver and gave the house touches of luxury that make it the envy of the neighborhood.
to 2,000 hours of free labor in three years.

As a result, thousands of women and children are working continually in several settlements on the outskirts of Vienna, earning their future homes. They make bricks, dig foundations, sift sand, and mix mortar. On Saturday and Sunday the men arrive and work from dawn till dark. The first settlement was founded by war invalids, on the imperial hunting grounds near Schönbrunn Palace, and is named "The City of Peace."

The park walls were pulled down for material with which to build the first houses. The bricks, each stamped with the double eagle of the Hapsburgs, will now help to shelter the human wrecks that fought in vain to preserve the great empire.

These invalids and their families are excavating rock, rooting out stumps by hand, and building a church and schoolhouse wherein to center their community life. Soon two thousand homes will stand where royalty once maintained its celebrated shooting-box.

While these settlements have adjusted the difficulties of a few thousand families, the city's most important problem has been left unsolved. The half million perishing members of the middle class, who have made Vienna famous for her university, clinics, music, and art, have gone to the wall in coping with the cost of living, whose curve for 1922 looks like one of Austria's mountains.

Being a capital, Vienna enrolls in its middle class persons of highly diverse occupations. It embraces field marshals, lawyers, doctors, university professors, admirals, civil servants, artists, scientists, clerks, teachers, officials, and many others whose source of income is a fixed salary, rents, or a pension.

MIDDLE CLASS LIVES ON COMMUNITY KITCHENS

While the wages of skilled labor have almost kept pace with the depreciation of the crown, the incomes of the middle class have dwindled away to almost nothing.

The rent law holds their old homes for them, and there they hide away from the sight of the city, creeping forth once a day to be fed in the community kitchens. They have long since pawned their trum-
THE HOUSE OF PARLIAMENTS IN VIENNA

The main approach to this handsome government building, known as the Reichsrats-Gebäude, is adorned with bronze horse-tamers and statues of Greek and Roman historians. In front of the building is the Pallas Athena fountain, with the colossal figure of Pallas surrounded by numerous allegorical figures. In the background towers the Town Hall (see also page 100).
THE STAIRS OF THE CAPUCHINS AT SALZBURG

In the picturesque city of Salzburg, some 200 miles west of Vienna, is the famous Capuchin monastery, approached by the Kapuziner-Stiege, or "Way to Calvary."
VIEW TOWARD THE KAUNSER TAL, TYROL

This is one of the loveliest valleys in the Tyrol and is a favorite resort for walkers. Before the World War, automobiles were prohibited in this vale.
GIRLS FROM THE WACHAU DISTRICT NEAR VIENNA

Before reaching Vienna, the Danube enters a long, narrow defile known as the Wachau, noted for its scenery and for its many medieval legends (see also illustration on page 93).
TONGUE-LASHING IN TYROL

The Austrian peasant to the right is from the Oetztal district, the other is from Puster Tal, both in Tyrol.
THE SUMMIT OF GROSSEREDER. IN THE HOHE TAUPEN, TIROL.

With an elevation of 12,169 feet, this is one of the loftiest peaks in Austria, but for the expert mountain climber it is easy to scale.

Standing at the head of the Wachau defile and commanding the river from an elevation of 1,500 feet, this was once a dreaded robbers' castle.
A MEDIEVAL BUILDING IN KREMS, ON THE DANUBE

Stein, Und, and Krems, three small towns of Middle-Ages aspect, stretching along the banks of the Danube above Vienna, have the appearance of one long, quaint city.
The separate mess maintained by the American Relief for the University Professors came to have the air and distinction of a club. Here the most brilliant men of Vienna were fed every day at the cost of a cent and a half. Famous scientists, archeologists, mathematicians, and historians, whose faces were the color of wax from undernourishment, gathered every noon for their one adequate meal of the day.

The dinner was based on Dr. Clemens Pirquet’s new “nem” (nutritive elements in milk) system of calculating the number of calories necessary for a well-balanced meal. No matter what the menu might be, nothing was ever left on the plates. Bits of bread that were not eaten, perhaps, were carried away in the professors’ pockets, against the hour when they once had their evening meal.

TALES OF DISTRESS AT THE PROFESSORS’ MESS

The writer was a guest at the Professors’ Mess last June, about the time the crown had fallen in a few days from 14,000 to 21,000 to the dollar. One newspaper was warning the city against rioting and another was advocating the sale of Austria’s art treasures. Every one at the mess was talking of the disaster.

A celebrated chemist told those at his table that he had been obliged to give up plans for a holiday picnic for his wife and children because now it would cost fifteen cents instead of ten for the luncheon and carfare. Another professor arrived and was hailed by the tables because he had just received a suit from a friend in America. It was too small, but that did not matter. The man’s other suit was patched and threadbare from seven years’ continuous wear. A new suit would have cost the price of half a wagonload of coal.

A professor of ancient history was discouraged because the street-car fares had gone up from 80 to 150 crowns. He lived in a suburb four miles from the University, and this increase of his budget would force him to get up an hour earlier and walk down town.

An under professor of philosophy announced that a well-known lawyer was about to solve his economic problem by taking a job as chauffeur. The consensus of opinion seemed to be that the man was lucky to have found such a job, as there are only 5,474 passenger cars in Vienna. “At least he will not have to live on $20 a month, as I do,” said the chemist.

“You are fortunate; I make only $11,” said the under professor. “See my boots; and I cannot buy new ones this winter.”

He thrust out his feet and revealed shoes tied to his feet by extra shoelaces. They had been mended and remended many times until the leather would no longer hold the stitches.

CITY FOLK GO ON FORAGING EXPEDITIONS

The hunger of many active persons is not satisfied with one meal a day. Yet food prices in Vienna have mounted to such proportions that they would be considered expensive according to New York standards. Butter is 60 cents a pound, sugar 13 cents, coffee and tea are 50 cents, and milk for children over a year old is not obtainable at any price.

That is why thousands of the hunger-ridden population go on foraging expeditions every Saturday and Sunday, walking great distances with packs of goods on their backs to exchange for food. The peasants are not often willing to accept worthless crowns for their products. The Viennese must bring them instead bolts of cloth, aprons, stockings, shirts, or some coveted ornament for the women. These are exchanged for flour, lard, milk, wheat, eggs, potatoes, and butter, which must be carried all the way back to the city in their knapsacks (see page 81).

FLUCTUATIONS IN EXCHANGE MAKE BANKS HIVES OF INDUSTRY

Calculations in Austrian currency involve astronomical figures, and the inflation of the currency and speculation have resulted in increasing the work in banks until this employment is the largest in the city. Demands on banks are enormous, and Vienna now has twenty incorporated institutions and more than two hundred private ones. Luncheon is served to the employees of banks at cost price, since the managers have learned that undernourished men and women cannot do efficient work.

Besides the banks, there are hundreds
SOME OF THE FIVE HUNDRED CHILDREN SENT TO ENGLAND TO RECOVER FROM THE EFFECTS OF UNDERNOURISHMENT

CHILDREN LEAVING FOR HOLIDAYS IN FOREIGN COUNTRIES

Thousands of young Viennese have been taken into homes in Switzerland, Holland, Denmark, Norway, Sweden, and England by charitable persons, who have given them eggs, milk, and nourishing food.
of small wechselstuben where dollars, Czechoslovakian crowns, lire, or marks are exchanged for crowns, according to the daily reports from the Exchange. These little money-changers, who have made fortunes from the collapse of the crown, are always surrounded by knots of anxious Viennese, who come to peer at the quotations pasted on the windows or to ask at the counter for news of their country’s condition. The daily value of the crown is an unfailing index.

It was the children of these money-changers and the food profiteers who occupied the flower-decked carriages drawn by two horses during a church festival last June. Many of the Viennese who had stood in line for hours in order to save a cent on a loaf of bread were angry and discouraged at seeing 100,000 crowns spent on a carriage and flowers.

SHE DOES WITHOUT COAL, BUT MUST HAVE A MAID

Many members of the fallen aristocracy cannot be convinced that the present state of things is to continue. They meet among themselves and talk vaguely of a new régime, a dictator of their own class, who will restore their lands and social position. The members of one titled family, whose remaining capital is in Italian lire, are living in comparative grandeur. They keep an electric car and three servants and give their friends luncheon parties at which seven courses are served. In six months the lire will be spent, but they have made no plans for the future.

In another palace near by a baroness is living, surrounded by valuable paintings and first editions which she refuses to sell. Last winter she had no money to buy coal and was obliged to remain in bed during zero weather; but a maid brought luncheon to her room. To give up a maid and buy coal with the wages paid was not to be considered.

Knowing that second-hand dealers can only pay a fraction of the real value of jewels and furs, curious methods are often used to bring such articles to the attention of American and English travel-
ers. A hotel porter follows guests into
the elevator to ask if the *gnädige Frau*
will be so kind as to glance at a very su-
perior emerald that must be sold at once
by a relative of the royal house. A waiter
brings a superb ermine cape with the
breakfast tray and suggests that the kind,
indulgent American husband buy this un-
heard-of bargain for his beautiful lady.
A woman clerk in a tobacco shop offers an
Egyptian belt of silver for which her
client asks but a few dollars.

**COFFEEHOUSES STILL WELL PATRONIZED**

The famous coffeehouses of Vienna,
where the population repairs, even in busi-
ness hours, for news-
paper reading, letter-
writing, chess, or gos-
sip, are well patron-
ized. The Austrian
cannot change his
spots, even when na-
tional calamity is upon
him. He still lounges
half his time away,
although his allowance
of coffee and *schuappes*
is cut down and he
can no longer be gen-
erous to the waiters.

In a little restaurant
near the Ring is an
old Hungarian waiter
who has watched the
city pass the door for
fourteen years. "Now
the only time I see any
of my old customers
is when they go in
there," he said, and
pointed across the
street to one of the
community kitchens.
"We waiters are hav-
ing hard times, too.
Before the war a
waiter was a cavalier.
Now we make twenty
or thirty cents a day."

**VIENNA A GREAT MARKET FOR ART**

Vienna has always
been to the south of
Europe what Moscow
was to the north—a great studio and mar-
ket for art. The magnificent galleries,
filled by the Hapsburgs, have drawn stu-
dents from all over the world. The shop
windows still display luxurious whimsi-
calities of modern art in whose invention
the native craftsman excels. Exquisite
ceramics, dyed silks, wooden articles, and
tooled leather have been Viennese special-
ties.

The drama and music have had the
same exuberant quality as the art of the
city. Many light operas have made for-
tunes for American producers and Vienn-
ese composers. Franz Lehar is living
to-day in what he calls the house the
Merry Widow built. Grand opera, performed in one of the most magnificent opera houses on the Continent, has always been well staged, enthusiastically attended, and its singers coaxed to America. The theaters have had fine traditions and scarcely a month passes without the production of one of Shakespeare's plays.

The famous night life of Vienna which begins at 7 o'clock, when the theaters and operas give their performances, used to continue afterward in the sidewalk cafés, culminating in a carriage ride around the King. Now it has lost its sparkle, and the diamonds blazing on a few profiteers furnish the only bright lights after 10:30.

Cabs no longer rattle along with ordinary pleasure-seekers. Feed is so expensive that a carriage with two horses costs more than a motor. One old cabman declared the only way he could make money on his horse would be to sell him to a butcher, but that such a profit was forbidden him by his affection for the beast.

ONE FEATURE OF THE EMPIRE'S SPLENDOR REMAINS

Only one feature of the old Hapsburg regime remains to-day to tell of a former empire's splendor. This is the Spanish Riding School, the only one of its kind in the world, which is still housed in the stables of the old Hofburg Palace.

This riding school was brought to Austria by Karl VI, after he had been put out of Spain in his other rôle of Carlos III. Founded in 1729, it was kept up for the pleasure of the royal family, who gave private performances for their friends, but never admitted the public.

Now there are only 28 horses left, magnificent stallions, who go through their paces five or six times a year, while the newly rich of Vienna applaud from the royal boxes.

The Socialist Democrats were loath to continue this tradition, but the chief riding-master convinced them that his institution was something like a museum and therefore should come under the classification of art. This argument won the day.
VIENNA'S VOTIVE CHURCH SEEN THROUGH AN ARCHWAY OF THE TOWN HALL

The new Rathaus, or Town Hall, built in 1872-82, is one of the city's most imposing edifices. Its massive tower rises to a height of 328 feet (see also illustration, page 87).
A FEW OF THE MILLION VOLUMES IN THE LIBRARY OF THE IMPERIAL HOFBURG

The Great Hall of the Hofburg is considered one of the finest library halls in the world. Many of its 33,000 manuscripts are priceless.
Austria was at its greatest when Maximilian I, by clever alliances through his grandchildren, secured Spain, half of Italy, and the Netherlands. To-day the nation’s territory is only twice that of Switzerland, and her population has been reduced from 55,000,000 in its dual-monarchy days to 6,000,000. Moreover, 39 per cent of her area is covered with forests—a percentage that is exceeded only in Finland and Sweden. Wood, therefore, is the most important export and the only raw material, except magnesite and iron ore, that can be sent out in large quantities.

Before the war, the empire was one of the greatest wood producers in Europe. To-day the largest of the hardwood forests lie beyond her new borders, out of reach, like her former coal mines.

In proportion to her area, Austria is the second country in Europe as regards available water power. Her unnumbered sites would be capable of giving more than 4,000,000 horse power if the $226,000,000 necessary for development could be raised. At present Austria’s annual coal bill amounts to $90,000,000, and the country is being run on one-third of the coal needed. This shortage has brought about stagnation, and unemployment doles must be paid out by a government already impoverished by the immense sums being paid to state employees, many of whom are idle. Ten per cent of the population is said to be supported by state funds.

**MONEY PRESSES CONTINUE TO RUN AT FULL SPEED**

Having to import most of her food, Austria continues to consume more than she produces, and makes up the deficit by eating her capital—partly by selling property to foreign countries (Stinnes, the German head of many trusts, has recently bought the richest iron mine in all Europe) and partly by printing worthless paper money.

Although this paper money has reached a total of unnumbered billions of crowns, the presses are still turning, currency is falling, prices are rising, workmen are demanding more wages to meet the new conditions, and the cycle goes on.

The state railroads are running under a yearly deficit of billions of crowns; yet 60 per cent of the passengers travel free or at a reduced rate; passes are issued to all railroad employees and their families, the widows of former employees, deputies to Parliament, journalists, and government employees and their dependents.

**VIENNA’S GREATEST ASSET, HER GEOGRAPHICAL SITUATION**

In spite of Vienna’s precarious situation to-day, she has one asset which nothing can destroy. The city stands at a point where the trading route from the Baltic to the Adriatic crosses the great waterway of the Danube. At this logical center of commerce and shipping, grain and cattle from the east pass industrial products from the west, and here seven great railroads converge that connect Vienna with all of central Europe. No matter what internal disorders may occur, it seems unlikely that the city can be wiped off the map completely.

A study of the states of the former empire will explain why Vienna was its nerve center and the natural capital of these small countries.

Political changes have not altered the city’s geographical situation, and the Danube still flows to Vienna through the opening in the mountain ranges, bearing ships and their cargoes for distribution in eastern Europe. Vienna is still and must remain a sort of inland seaport on the largest commercial waterway in Europe (except the Volga in Russia).

Vienna’s position on the map may prove in time to be her salvation.
THE MAGIC BEAUTY OF SNOW AND DEW

By Wilson A. Bentley

With Illustrations from Photographs by the Author

WATER plays an all-important and most beneficent part in Nature's plan. Numerous bulky volumes might be written telling of its many roles in nearly all the activities occurring upon the Earth. It might properly be called the "life-giving fluid," for life in any form is not possible without it. However profoundly one may be impressed by the vast tasks that water performs, one is almost equally impressed and amazed at the marvelous beauty and diversity of its forms—in clouds, snow, frost, ice, dew, rain, rivers, waterfalls, lakes, and glaciers. And these are not only beautiful in themselves, but many of them, as snow, frost, and dew, collect upon and beautify various natural objects. The dew and hoarfrost add rarest loveliness to vegetation and to various objects, while a snowfall changes the aspect of Nature over vast areas, imparting chaste beauty to forests, mountains, and plains.

WATER FORMS ARE DEPENDENT ON TEMPERATURE

The form that water assumes, whether fluid or solid, depends largely upon its temperature. Water molecules possess poles, negative and positive, which tend to draw them together in certain alignments forming solids (crystal forms); but most of them (all those forming fluid water) are so disturbed by heat that they dart about rapidly among themselves, making it impossible for them to unite. But when they attain a relative degree of quietude, under conditions of cold, their poles draw them together, and they remain fixed, pole to pole, in regular order. The number and arrangement of the molecules in crystals determine their form, whether hexagonal, pentagonal, or otherwise.

A crystallographic law decrees that crystals which grow rapidly—the branching snowflakes, for example—tend to assume branching forms; conversely, those that grow slowly, in a greater degree of cold, tend to assume solid forms.

Dew is one of the most common forms of fluid water formation, though jointly with the hoarfrost it is one of the least as regards quantity. It is largely a nighttime phenomenon, because only then can the water molecules in the air become quiet enough to gather and remain in a "swarm" upon vegetal and other objects. The dew forms in such a gentle and unobtrusive way that it fails to impress the student, as do many other water forms.

Although dewdrops, like raindrops, lack variety of form, they exhibit much variety of arrangement on plant leaves and other objects. The myriads of opalescent, iridescent drops sparkling over meadow and hillside of a dewy morning create one of Nature's loveliest effects. Dewdrops collect beautifully upon grass blades, strawberry and clover leaves; but the dew-laden geometrical webs of the garden spider are lovely beyond description and form the masterpieces of dewy art (see pages 110 and 111).

Hoarfrost is, perhaps, the least, as regards quantity, among the main divisions of water forms; yet it provides a world of beauty and diversity. It forms in the open on cold, calm nights, when the temperature goes below the freezing point of water. When the deposits are copious, all outdoor Nature is converted into a fairyland rivaling that produced by an ice storm.

Yet the real masterpieces of the frost are wrought indoors in the winter time, upon our window-panes in cold rooms, where all can see and admire them. The tiny molecular artists create an infinite variety of shapes, suggesting trees, ferns, coral, lace, starry firmaments, tropical forest effects, and castles (pp. 108-109).

SNOW CRYSTALS

Of all the forms of water, however, the tiny six-pointed crystals of ice called snow, that form in such quantities within the clouds during storms, are incomparably the most beautiful and varied.
SNOW JEWELS COLLECTED BY THE CAMERA

Snow crystals must be photographed practically out of doors in a low temperature. One method is to catch the snow flake on a piece of soft black velvet. The camera is then placed over it, and the dark, contrasting background shows up the crystal in all its beauty. Details of outline are made clearer by cutting away the image from the photographic film. The crystals shown on this page are magnified from 8 to 30 diameters.
THE TREASURES OF THE SNOW

The delicate tracery of many snow crystals is brought out in greater detail by photographing them on a glass slide, with light transmitted from below by means of a mirror. The middle crystal in the second row from the top was photographed in 1886 and was the first specimen of outstanding beauty to be secured. The middle crystal of the top row is a remarkable "spiderweb" form. The specimens on this page are magnified from 8 to 60 diameters.
SOLID AND BRANCHING CRYSTAL FORMS OF RARE LOVELINESS

Jewelers, art craftsmen, metal workers, and silk manufacturers frequently find inspiration for art designs in the varied and symmetrical forms of snowflake gems. These flakes have been magnified from 10 to 50 diameters.
UNUSUAL FORMS OF SNOW CRYSTALS

The natural form of the ice (water) crystal is the triangle, but such forms in snow are of rare occurrence, appearing only during very cold temperatures. The magnification of the crystals reproduced on this page range from 20 to 40 diameters.
WINDOW TRACERY OF JACK FROST

This consummate artist of Nature creates his real masterpieces on window-panes in cold rooms. A variety of shapes suggest trees, ferns, coral, lace, starry firmaments, tropical forest effects, and castles. These forms are magnified from two to four diameters.
Images produced by window frost and window ice

The image in the upper left corner is the unusual "snowflake" design; immediately below it is an example of window ice. In the lower right corner Jack Frost seems to have shaken out his feather bed. The upper right illustration is magnified four diameters; the others, with the exception of the window ice, which is greatly reduced, are natural size.
MAGIC WROUGHT BY DEW AND ICE

Dew has transfigured a grasshopper (upper left); hoarfrost has wrought its artistry on a blackberry leaf (upper right); dew has spangled with glistening gems a spider's web (left center), a strawberry leaf (lower left), and a clover leaf (lower right). At the right center are ice columns in peaty soil. The dew pictures are natural size; the others are much reduced.
ART FORMS OF DEW, FROST, AND HAIL

The upper left picture shows hoarfrost on a spear of grass. The lower left image shows rare forms of hailstones (natural size). The other illustrations show how dew gems a blade of grass, clover leaves, and a head of caterpillar grass.
The principal type forms of snow crystals

The first row shows the six-sided columnar forms of crystals, common to zero weather and high clouds, and, upper right, the granular forms due to condensation of fluid cloud droplets. The "cuff-button" and other forms shown in the middle row are general storm types. At the left (bottom row) is the most common of all snowflake forms. Magnified from 8 to 40 diameters.

Snow formation occurs usually, if not invariably, within all storms and in all climes; but in the torrid zones, and in summer in the temperate zones, its formation is, of course, confined to the frigid upper part of the storm-clouds. It melts and is converted into rain when it falls below a certain altitude, except upon high mountains.

The wondrous beauty of the tiny individual crystals of snow attracted attention in very early times, for we find references to them in many ancient writings. And in the Scriptures, in the Book of Job, we find the quotation, "Hast thou entered into the treasures of the snow?" But it is only very recently, since the advent of dry-plate photomicrography, that their beauty has been fully realized and portrayed.

Although many snow crystals, both of the same and of different storms, strangely resemble one another and possess features in common, new and unique patterns are continually being wrought in Nature's cloudland laboratory.

The greatest charm which this unique study possesses for those "entering into the treasures of the snow," is that these treasures are absolutely inexhaustible.

For all time this annual miracle of the snows will recur and the favored regions of the Earth will be showered with countless jewels of almost unbelievable beauty to delight and thrill observers.

The marvelous beauty of the snow crystals has been revealed in more than 4,000 photomicrographs (no two alike), secured by the writer during the last 37 years. Jewelers, art craft shops, metal workers, silk manufacturers, and schools are now using these exquisite snow crystals for designs and as objects for study.

ORGANIZED FOR "THE INCREASE AND DIFFUSION OF GEOGRAPHIC KNOWLEDGE"

TO carry out the purposes for which it was founded thirty-four years ago, the National Geographic Society publishes this Magazine. All receipts are invested in the Magazine itself or expended directly to promote geographic knowledge.

ARTICLES and photographs are desired. For material which the Magazine can use, generous remuneration is made. Contributions should be accompanied by an addressed return envelope and postage.

IMMEDIATELY after the terrific eruption of Mount Katmai, in Alaska, a National Geographic Society expedition was sent to make observations of this remarkable phenomenon. Four expeditions have followed and the extraordinary scientific data resulting from the world. In this vicinity an eighth wonder of the world was discovered and explored - "The Valley of Ten Thousand Shocks," a vast area of steaming, spouting features. As a result of The Society's discoveries this area has been created a National Monument by proclamation of the President of the United States.

AT an expense of over $50,000 The Society sent a notable series of expeditions into Peru to investigate the traces of the Incas. Their discoveries form a large share of our knowledge of a civilization which was waning when Pizarro first set foot in Peru.

THE Society also had the honor of subscribing a substantial sum to the historic expedition of Admiral Peary, who discovered the North Pole.

NOT long ago The Society granted $25,000, and in addition $75,000 was given by individual members through The Society to the Federal Government when the congressional appropriation for the purchase was insufficient, and the finest of the giant sequoia trees of California were thereby saved for the American people and incorporated into a National Park.

THE Society is conducting extensive explorations and excavations in northwestern New Mexico, which was one of the most densely populated areas in North America before Columbus came, a region where prehistoric peoples lived in vast communal dwellings whose ruins are ranked second to none of ancient times in point of architecture, and whose customs, ceremonies and name have been enshrined in an oblivion more complete than any other people who left traces comparable to theirs.

C., as Second-Class Matter. Acceptance for mailing at special rate of postage provided for in Sec. 1103, Act of October 3, 1917, authorized July 1, 1918.
A watch should be accurate as well as beautiful

KEEPING accurate time is the primary function of a watch. The Hamilton has performed this difficult task so successfully, for so many years, that it has earned the reputation of being the Railroad Timekeeper of America.

Jewelers like to sell Hamilton Watches because the dependability of the Hamilton is a creditable reflection on their own selection and service. The Hamilton is a watch that is seldom returned for repairs or readjustment.

Besides the feeling of satisfaction and comfort derived from such a watch, there is the added joy that comes from possessing an object of fine workmanship. Accuracy and beauty are on a par in the Hamilton Watch.

It is now possible to get Hamilton accuracy, dependability, and service at a very reasonable cost. Our No. 974, movement only $25.00, can be fitted by your jeweler in a case to suit your pocketbook.

HAMILTON WATCH COMPANY, Lancaster, Pa., U. S. A.

Hamilton Watch
"The Watch of Railroad Accuracy"

Hamilton No. 920 in "Burrin" Case $172

The demand for cases of green or white gold is met by this beautiful model. 14k engraved, 23-jewel, five-position adjusted movement. Dial, sterling silver; numerals, 14k raised gold.

Hamilton No. 930 in "Florin" Case $117

Unusual are these inlaid color numerals, on a silver dial. 23-jewel, five-position, adjusted movement. Green gold permanent case.

Hamilton No. 910 in "Fulton" Case $43

A splendid timepiece. 17-jewel, adjusted movement, engraved case of green gold filled 153 year, with metal dial and radiating numerals.
IN every community, men of broad experience and women of fine perceptions, have learned that the lasting thing is the thing of true value. And so, in their homes you find expressions of rare craftsmanship. And on their finest cars — Mason Cords. In short, their every possession reflects that ceaseless desire of its maker to attain the genuine and exceptional.

Branches in Principal Cities

THE MASON TIRE & RUBBER COMPANY. KENT, OHIO
"My Marmon Surely Stands the Gaff
-cross continent eight times"
By Barney Oldfield

"I've driven many makes of high grade cars, but none ever had such hard service as my Marmons.

"The reason for this is that since adopting Marmons I have undertaken the manufacture of Oldfield tires, which I test personally. To get definite, first-hand knowledge of how my tires stand punishment, I've driven my Marmons continuously under most extreme conditions—high speed on race tracks, ordinary travel on bad roads and hard going on cross-country trips.

"My Marmons have served as pacemakers for a lot of races during the past two years, and I have driven all over the country visiting Oldfield dealers.

"Mrs. Oldfield is equally enthusiastic over her Marmon Coupe, having driven it across the continent twice. She comments constantly on its easy handling, comfort and dependability.

"I've had a hunch that the national survey of Marmon mechanical maintenance would prove the great economy of this sturdy car, and I'm not surprised that the monthly average is as low as $4.71. My Marmons pile up mileage with practically no maintenance expense to me.

"Believe me, there's no car to equal a Marmon for dependability, performance, and economical maintenance."

UNDERWOOD PORTABLE
"A man has but one moment of life to call his own.
The moment just passed into the score of Time's count, the
moment which the hand of the clock trembles o'er, a hair's breath
yet to go—these are no man's to claim. One is gone forever; the
other may march the passage of his soul.
"Only this moment, this throb of the heart, this half-drawn breath,
is a living man's to claim. The bigger has it—the monarch can
command no more."

The Value of Time

Chief train dispatcher for the world, I am chief life
dispatcher for all men.

Fresh minted from my hand, behold a New Year
now spread out before you.

Half a million golden minutes—a royal treasure! Beware
lest it slip away through careless fingers.

A New Year's resolution? Aye, here is one. Say to
yourself every morning of the year, "Today I will make
every minute count!"

That this will make all your
dreams come true, who should
know so well as I?

For I am Father Time.

Trust Your Own Thoughts of Packard

In your own mind you instinctively award a high place to Packard.

The thought of Packard comes first, and instantly, when the finest cars are discussed.

The name of Packard leaps to your lips when you are seeking a synonym for the best.

These instincts, intuitions and impressions of yours can be trusted.

They can be trusted because they are true—and because your mental process in regard to Packard is the almost universal process.

Packard has passed into the inner life of the nation and taken a permanent place in literature as symbolic of pre-eminence.

Nothing that we might say of Packard could possibly compare with this spontaneous, almost unconscious, and well-nigh unanimous tribute.

Trust your own thoughts of Packard—they will lead you to unalloyed satisfaction.

This great author knows the animals of the wilderness more intimately than any other writer. His absorbing tales of their adventurous life are laid in the range of country where no hunters go.

Visit the Great North Country from Your Easy Chair

From the Great White Way to the Great White Spaces

Pack up your troubles and follow CURWOOD into Adventureland

COME to the great magic land of the Northwest—come where the breath of romance stirs in the blood of men and women—come to the land of adventure, strange, enchanting, wondrous. Stand under the great open sky—gaze at the wondrous Red Moon and the North Star—hear the cry of the wolf, smell to the magic of the forests—sit by the soft glow of the camp-fire—come to the top of the world and feel the spell of the vast white wilderness! You do not have to stir out of your easy chair to do it.

James Oliver Curwood takes you here—great drama, played by great and fearless men who quicken your red blood and lift you clear of care and worry, carrying you far and happily into Adventureland!

JAMES OLIVER CURWOOD
6 Complete Volumes — Now at a Special Price

There never was a writer with the compelling power of James Oliver Curwood. His books have that gripping, broad interest of big things done in a big way. Whether you read "Baree, Son of Kazan," the story of the little outlaw wolf-dog, or about "The Hunted Woman," the appeal fairly takes you by the heart. As no man has, here he brings to you the atmosphere of the North, the appeal and mystery of the wilderness, the scent of crisp air, the overpowering sensation of great, untrammelled spaces.

Here are the humor and tragedy, the griefs and glories of a great and glorious country. More than 2,000,000 copies of these books have been sold. The tales have been eagerly sought by moving picture companies. And now you have the opportunity of obtaining a beautiful six-volume set of James Oliver Curwood at practically half the regular price and on easy terms.

Kindly send me the six-volume set of James Oliver Curwood, bound in dark maroon cloth, with gilt lettering in gold, and I am to have the privilege of examining them for seven days and at the end of that time, if I decide to keep them, I will forward you $5.00 and send $1.00 each month for three months, making a total of $3.00 in full payment which is almost half the regular price. If I wish to do so, I may return the set before the end of the examination period and then you will owe me anything.

By sending cash with your order you can secure this set for only $7.00.

SEND NO MONEY

If you are tired of ordinary novels, if you are "fed-up" with the humdrum of your daily routine, if you want to feel the clean, white snow of the great Northwest under your feet, if you want to live among real men and real women, follow Curwood into adventureland! Don't bother to send any money. Merely mail the coupon and the six volumes of Curwood will be sent to you at once. When they arrive, you have the privilege of examining them for seven days, and paying for them in small monthly installments or returning them. This offer is good only while the present special edition is available. Take advantage of it now—mail the coupon or a letter at once and make sure of your set.

NELSON DOUBLEDAY, Inc.
Dept. C-201
Garden City, New York
You still have time to escape three months of wintry wind, cold and sleet. Come to the land where coal shortages mean nothing in the face of warm sun rays and soft breezes from the blue Pacific—California!

California, where snow on distant mountain peaks merely accents the pleasure of warm, green valleys and orange and vineyard-clad slopes!

**Six Great Gateways**

Plan your trip aright. Too often visitors to California fail to see many of its wonders through not routing their tickets properly.

There are six great railroad gateways to California—the Shasta gateway from the north, the Feather River (Western Pacific) and American River (Southern Pacific) gateways from the east, and the Union Pacific, Santa Fe and Sunset gateways from the south. There is also the enjoyable steamship route through the Panama Canal.

Really to see California you must enter from a northern or eastern gateway and return by a southern gateway (or vice versa), thus traversing the length of the State and seeing all of its wonders, and at no greater cost.*

We will gladly send you without charge a folder on how to see California. It contains a special map showing the State in relief, illustrates many of the points of interest and marks the six great gateways and the railroad lines traversing the State.

**Your Summer Vacation**

You will perhaps need this folder to plan your summer vacation trip. More and more people each year are finding California the ideal summer vacation land.

The Pacific breezes which keep us warm in winter, likewise keep us cool in summer. For instance, San Francisco and Eureka, California, according to government statistics, are the two coolest cities in America during the summer months.

**Send For Folder**

Californians Inc., a non-profit organization to furnish authentic information about California, will gladly give you full details about the way to see the most of California for your fare.

Write today for this folder or for any other information about California you wish. There is no charge or obligation of any kind. Address

**Californians Inc.**

500 Hurton Building, San Francisco, California.

Please send me without charge your folder—"How To See California."

New Way to Keep Fit

Walter Camp Shows How to Build Health and Efficiency in 10 Minutes' Fun Every Day—His "Daily Dozen" Now on Phonograph Records

NOT so long ago, if you were to go up to an "old-school" physical culturist and tell him that his methods were all wrong—that a person can keep perfectly fit in only 10 minutes a day—he would very likely scoff at you.

Yet today there are somewhat over a million people in America who know it can be done. They not only keep themselves in perfect physical trim in ten minutes a day—but they get lots of genuine fun while they're doing it!

Credit for the discovery of this easy short-cut method of body development goes to Walter Camp, perhaps the greatest authority on athletics and physical development in America today. Mr. Camp's whole system is embodied in twelve simple exercises which are known as the "Daily Dozen." Already these twelve exercises are completely revolutionizing present-day methods of physical culture.

The "Daily Dozen" made their first appearance during the war. A navy official claimed that the regular setting-up drills and calisthenics left his men tired out. Instead of building up efficiency, they often tore down efficiency. So he came to Walter Camp for a solution of the difficulty. The famous Yale coach, after months of experimenting, had just perfected his "Daily Dozen." So he turned them over to the army and navy officers.

The success of the "Daily Dozen" in the training camps was soon apparent. The officers in charge of the camps had never seen anything like it. The exercises seemed to double the pep of the boys in training. Instead of leaving them tired out and exhausted, the "Daily Dozen" gave them a wonderful new enthusiasm and vigor. Even members of the Cabinet, recognizing the great value of Mr. Camp's method, became ardent "Daily Dozen" fans. As a guard against physical break-down, due to over-work, they practiced the "Daily Dozen" religiously.

The "Daily Dozen" works on an entirely new plan—there are no chest weights, no Indian clubs, no apparatus of any kind. All one needs to do is imitate the exercises of caged animals, who keep it by stretching their stomach muscles!

As Mr. Camp said in his recent speech before Congress, which is printed in the Congressional Record:

"We are all wild animals in a state of captivity. When you stop to think of it, man was meant to earn his bread by the sweat of his brow, and in the early days he had to dig for what he was going to eat. He had to work hard to get it. Today, instead of that, your food is brought to you on a platter. You do not work for it. A great deal too much of it is brought and what is the result? The result is that you are being injured by civilization.

"Now what do the wild animals in a state of captivity do? You do not see any lion or tiger kicking like this, to exercise his legs. He knows his legs are going to be good enough. But what is he doing all the time? He is stretching those big muscles of the body, bending and stretching his body muscles. That is an inherited instinct in those wild animals. The wild animals and the tame animals, too, know that it is the stretching of those body muscles that counts, and nothing else. Everything else takes care of itself."

It is on the principle of stretching that Mr. Camp has based his "Daily Dozen." These, as physical culture authorities now admit, provide all the exercise people really need to keep in proper physical condition.

And now, with the special permission and sanction of Mr. Camp, a wonderfully ingenious improvement has been made in the manner of doing the "Daily Dozen" which just doubles the enjoyment one usually gets from their practice.

Each one of the twelve exercises has been set to inspiring music on phonograph records that can be played on any disc machine. A chart accompanies each record showing by actual photographs just how to execute the "commands," which are given by a voice speaking on the record.

This innovation has made a decided hit with "Daily Dozen" fans. Each exercise has been adapted to a tune particularly fitted for the movements. So that all a person has to do is put on a record, and let his movements keep time to the spirited tune being played.

In this way, one is literally carried through the whole "Daily Dozen"—in most cases without even realizing that he is taking exercise—exercise which incidentally is building up a splendid reserve of health, strength and energy.

Some of the results brought about by the "Daily Dozen" to music are nothing short of astonishing. The exercises seem to release an entirely unsuspected supply of energy, which is reflected in a marked increase in one's capacity for both mental and physical exertion. People of nervous tendencies
have seen their nerves become strong and calm in a remarkably short time. Many, once troubled with nervousness, now enjoy eight hours of restful sleep regularly. Stout people have seen their excess fat disappear—often at a surprisingly rapid rate. Needless to state, all these benefits have resulted in great increases in mental and physical efficiency.

Music was the one thing needed to make the "Daily Dozen" a 100 per cent way of keeping fit. Music has a wonderful power to inspire action. A fine rousing tune, such as the great Sousa march, "The Stars and Stripes Forever," has a stimulating effect. It actually sweeps one along. That is why there is "no loading on the job" when one does the "Daily Dozen" the new way.

No matter how "tired" one may be, all he needs to do is to put one of the "Daily Dozen" records on the phonograph. The music will do the rest. You will not want to stop until you have gone through the whole six sets. Of course, very likely you will want to do them all over again— as many "fans" usually do.

Any man or woman who does the "Daily Dozen" to music regularly, even if it is only six or seven minutes a day, is certain to reap manifold rewards in increased health and efficiency. The "Daily Dozen" to music keeps one filled with a seemingly unending supply of vigor and endurance. They inspire an actual eagerness for hard work or play. Not only have they a wonderfully soothing effect on shattered nerves, but in many instances they have banished cases of stomach trouble which resisted all other forms of treatment.

But perhaps the greatest value of Walter Camp's "Daily Dozen" to music is that they add a greater joy to living. They inspire a new cheerfulness, a new optimism, a new confidence that is only possible when one is enjoying glorious health.

Try the Complete System Free—for Five Days

You cannot fully appreciate the real joy of doing the "Daily Dozen" to music until you try it. So we want to send you absolutely free for five days, the "Daily Dozen" on phonograph records and charts illustrating the movements. These full-size, ten-inch, double-disc records, playable on any disc machine, contain the complete Daily Dozen Exercises, and the 60 actual photographs accompanying the records show clearly every movement that will put renewed vigor and glowing health into your body—with only ten minutes' fun a day. A beautiful record album comes free with the offer.

No need to send any money. Simply mail the coupon below and get Walter Camp's "Daily Dozen" on phonograph records. Enjoy the records for five days, and if for any reason you are not satisfied, return them and owe nothing. But if you decide to keep the records, you can pay for them at the easy rate of only $2.50 down, and $2 a month for four months, making the sum of $13.95 to be paid. Thousands of people have paid $15 for the same system, but you can now get it for only $10.50 if you act at once.

Simply mail the coupon and see for yourself, at our expense, the new, easy, pleasant way to keep fit. You'll feel better, look better, and have more endurance and "pep" than ever you had in years—and you'll find it a fun to exercise to music! Don't put off getting this remarkable System that will add years to your life and make you happier by keeping you in glowing health. Mail the coupon today. Address Health Builders, Inc., Dept. 183, Garden City, N. Y.

"They Found Their Happiest Hours among their friends of forest and field"

SUCH famous men as Theodore Roosevelt, Thomas A. Edison, John Burroughs, Henry Ford, and Luther Burbank have found their greatest enjoyment in their understanding and appreciation of Nature. For them the fields and forests held a host of friends—the birds, the butterflies, the flowers, the trees—their individual charm.

Nature abounds with magic. For those who know its language a wonderful story is told by the simplest roadside flower. The real enchantment of the out-of-doors is lost to those who do not know the secrets of Nature, who miss its deepest meanings.

How can the raven be distinguished from the crow? What bird walks on the water? What plant gives a lost traveler his bearings? The answers to these and thousands of other interesting questions are found in the Little Nature Library, the beautiful four volume set that brings to you the whole wonder world of Nature’s secrets. In this, the most popular series of Nature books ever published, the story of the Birds, the Trees, the Butterflies, and the Wild Flowers is fascinatingly told by recognized authorities, profusely illustrated with 144 beautiful full-page color plates and many black and white pictures—365 different subjects are covered, 1,200 pages in all.

SENT FOR FREE EXAMINATION

You are invited to examine the Little Nature Library without cost or obligation. The coupon below brings the books to you for 6 days' examination. Note the wealth of interesting information, written by such authorities as Nuttall, Blanchard, examining the life-like illustrations in full natural colors, obtained from the National Association of Audubon Societies, painted by such famous artists as Bruce Horsfall.

If you decide to keep the books pay only the special low price on the convenient terms mentioned in the coupon. But take advantage of this Free Examination offer NOW, before it is withdrawn. Send no money—just the coupon.

By sending cash with order you can secure this set for only $7.00.
The same qualities which recommend the car to business men recommend it with equal force to everyone.

It is a car of exceptional hardihood; one that offers weather protection and comfort the year round; a car dignified in appearance and economical to run.

Its construction has made closed car history.

The steel body was known before on Dodge Brothers open cars, but its recognized advantages have never before been applied to the construction of a closed car.

The same thing is true of the baked enamel finish, which cannot be applied except where the body is built of steel.

The rear seat furnishings are removable, converting the entire section back of the front seat into a steel-walled compartment, with 64 cubic feet of loading space.

Dodge Brothers peculiar achievement, in other words, has been to make the sedan a practical car, so that everyone may enjoy its protection and usefulness at little more than the cost of an open car.

*The price is $1195 f. o. b. Detroit*
"How I envy those who are reading him for the first time"

The romantic story of Joseph Conrad, a Polish sailor who could not even speak English until past twenty—yet now acclaimed by other writers themselves as "the greatest living master of English fiction."

Every one finds in them something different to love and admire.

In his clear, free style, he is reminiscent of a great Frenchman like de Maupassant; in his insight into the tragic human emotions he is as discerning as Dostoevsky. He is as subtle as Henry James in his artistry; yet the life he depicts—the life mostly of outcasts, wanderers, and adventurers in the farthest places of the earth—is as glamorous with Romance as anything Kipling ever wrote. And all over his works lies the broadening majesty of the ocean—or the mystic beauty of the isles of the South Sea. It is an autograph combination of gifts. No wonder Hugh Walpole burst out, after reading one of Conrad's novels: "Here, surely, it ever, is genius."

Special Sale Now

No one ever reads only one book of Conrad. Once they start, they get the "Conrad fever." For no other living writer has there been such a spontaneous demand for a "subscription set." Conrad's publishers, accordingly, are now offering ten of his greatest novels at a special low price—and that every Conrad lover may have them. This set includes: The Rescue; Youth; Chance; Victory; Typhoon; Lord Jim; Almayer's Folly; The Arrow of Gold; An Chieftain of the Islands; The Secret Life.

We will gladly send this set to you for ten days' free examination. Simply mail the coupon or a letter. To those who act promptly we will also send free, a fascinating little book telling the story of Conrad's life. After you have read the estimates of Conrad by his fellow-craftsmen, given here, you can afford not to have on your shelves the works and life of a man who can inspire enthusiasm such as this. Mail the coupon now, while the special sale price is in force.

Doubleday, Page & Co.
Dept. 791 Garden City, N. Y.

John Galsworthy says: "Probably the only writing of the last twenty years that will enrich the English language to so great an extent."

H. G. Wells says: "One of the most distinct and valuable achievements of our time."

Sir Hugh Clifford says: "His books, I say it without fear of contradiction, have no counterpart in the entire range of English literature."

Governor Morris says: "Those who haven't read him are not well read. As one of your critics who are engaged in reading him for the first time, I bow to your superior judgment."

James Huneker says: "The only man in England today who belongs to the immortal company of Meredith, Hardy, and Henry James."

Ben Brack says: "I consider him the greatest living writer in the English language."

Johann Herbsheimer says: "In all his works there is a freshness of two absolutely orchestral in effect."

John Macy says: "For the no living author has inspired among fellow-craftsmen such enthusiasm and supreme estheticism."

—and enough additional words of praise, similar to those above, could be added, to fill this space.

Doubleday, Page & Co.

These 93 Branches
Serve and Protect Our Customers

The cornerstone of our American civilization is broad-gauge Agriculture—not man-with-the-hoe drudgery but up-to-date farming with power, machines, and modern methods. These hold famine away. Without these, all America would come tumbling back to the soil for daily bread. In 1831, when Cyrus Hall McCormick built his first reaper on a stone anvil in Virginia, toilers in the field could feed only themselves. Today six million farm families sustain more than a hundred million souls in this land, and many millions overseas.

The International Harvester Company is proud to have devoted nearly a century to the improvement of farming and farm life. Its work has been the invention, manufacture, and distribution of time and labor-saving machines; pioneer development that has created production and wealth. Today its service activities are handled through an organization that has been growing in value and usefulness for the nation during many decades.

Fifteen thousand McCormick-Deering dealers, scattered over the land, carry this Company’s service direct to the individual farms. Here come the calls for the millions of machines, for tractors and automotive equipment, for repairs, for instant aid in emergency. Here the swift red International Speed Trucks, popularly known in thousands of communities as “Red Babies,” live on the roads, helping the dealers to serve Agriculture.

Ninety-three International branch houses, strategically located as shown by the map, supply the 15,000 dealers and serve as links between them and the International factories. These are the centers in the network of International service. At every International branch house is a completely equipped motor truck service station, in charge of highly-trained specialists and road engineers whose single purpose is to safeguard the performance of International Motor Trucks, and among them the vast fleet of “Red Babies.”

Here, in fact, lies the secret of the universal satisfaction that International Motor Trucks have given in all fields of activity. Buyers of hauling equipment, and especially those confronted as we are by a problem of national distribution, are secure in a close-coupled relationship with International service. Thus the International organization, for ninety years a leader in American industry, has during the past sixteen years developed a reputation in motor truck design, manufacture, and servicing, vouched for by the owners of 60,000 International Motor Trucks.

INTERNATIONAL HARVESTER COMPANY

Could you tell this story?

Music may be just a succession of pleasant sounds—or infinitely more than that. It may tell a fine romantic story or it may portray some spiritual struggle that you yourself have experienced.

To know these things, to understand the significance of the music you hear, is to enjoy it to a vastly greater extent.

With a Victrola and Victor Records you get a thorough understanding of music such as can be secured in no other way. You are enabled to observe closely and study every detail of interpretation and become intimately acquainted with all music.

Then you discuss it with the same freedom as you discuss books, art, architecture or the drama—and with the same satisfaction to yourself and to your hearers.

Victrola

"HIS MASTER'S VOICE"

I’m simply full of nerver and punch
For I’ve had Campbell’s for my lunch.
It gives me all the strength I need
And makes me just a train for speed!

It’s all in knowing how!

And the very first spoonful of Campbell’s Vegetable Soup proves it! Thirty-two different ingredients prepared and blended by master-chefs whose whole lives have been devoted to good soup-making! Serving Campbell’s regularly is one of the ways a housewife shows she “knows how” to set a good table.

Campbell’s Vegetable Soup

is a hearty, filling dish. Sweet little peas, baby limas, juice-laden tomatoes, sugary corn, Chantenay carrots, golden turnips, white and sweet potatoes, chopped cabbage, snowy celery, alphabet macaroni, choice barley, French leeks, okra, and fresh parsley combine their rich flavors and nourishment with invigorating meat broths. Real food when you’re hungry!

Expansion

A million new subscribers were linked to the Bell System during the past two years—putting into operation a million new routes of talk, and a corresponding increase in all intervening facilities such as switchboards, cable and long distance lines.

No other country is so well equipped as the United States for telephone communication. Yet, because of this—because the telephone is so useful—the demand for service keeps growing greater.

The growth of telephone demand in the United States is greater than the growth of population. It is an intensive growth. An increasing percentage of the population is seeking telephone service.

The Bell System is providing for more investment, further technical achievement, more wires, switchboards and stations—and more subscribers. The American people require the best service. The best service means the most comprehensive service, not only for the necessities of to-day, but for the necessities of the future.

No. 1 Autographic Kodak Special
With Kodak Anastigmat lens f.6.3 and Kodomatic shutter

Pictures 2¼ x 3¼

Price $50

Picture opportunities that may never come again—those encountered in travel, for example—demand and deserve a conveniently carried camera equipped to make the most of them.

Such an instrument is the No. 1 Special which is not only compact to fit the pocket—it’s hand size—but in addition is complete enough, both mechanically and optically, to cope with even the difficult photographic situations.

The lens is the Kodak Anastigmat f.6.3—Eastman-made—a fast lens that cuts sharply.

The shutter is the Eastman-made Kodomatic that has achieved a precision never before realized in any shutter, and that offers an unusually wide exposure range with seven adjustable speeds from 1/2 to 1/200 second.

Photographic refinements include the rising front and the counter-sunk autographic attachment.

Aluminum body handsomely finished in finest quality genuine sealskin.

The No. 1 Special gives you pictures you will prize.

Beauty and convenience, as incentives to exquisite cleanliness, receive due recognition in the design and finish of Crane kitchen equipment for modern homes.

Stainless white porcelain—modified and adapted to household needs—provides a material of enduring character and finish, as easily cleaned as a china plate. Crane designers and craftsmen have made the most of this remarkable material in producing appointments of quality for kitchen, bathroom and laundry.

Crane engineers complete the circle by supplying valves, faucets and fittings of the same high character to insure uniform dependability in every Crane installation.
They Fight Film—
They who have pretty teeth

Note how many pretty teeth are seen everywhere today. Millions are using a new method of teeth cleaning. They remove the dingy film. The same results will come to you if you make this ten-day test.

Why teeth are cloudy
Your teeth are coated with a viscous film. It clings to teeth, gets between the teeth and stays. Film absorbs stains, then it often forms the basis of thin, dingy coats. Tartar is based on film.

Old brushing methods do not effectively combat it. So most teeth are discolored more or less.

Thus film destroys tooth beauty. It also causes most tooth troubles. It holds food substance which ferments and forms acid. It holds the acid in contact with the teeth to cause decay.

Germs breed by millions in it. They, with tartar, are the chief cause of pyorrhea, now so alarmingly common.

Now a daily remover
Dental science, after long research, has found two ways to combat film. Authorities have proved their efficiency. Now leading dentists, nearly all the world over, are urging their daily use.

A new-type tooth paste has been created to comply with modern requirements. These two film combatants are embodied in it. The name of that tooth paste is Pepsodent.

Its unique effects
Pepsodent, with every use, attacks the film on teeth.

It also multiplies the starch digestant in the saliva. That to digest the starch deposits which may cling to teeth and form acids.

It multiplies the alkalinity of the saliva. That is Nature’s neutralizer for the acids which cause decay.

In these three ways it fights the enemies of teeth as nothing else has done.

One week will show
Watch these effects for a few days. Send the coupon for a 10-Day Tube. Note how clean the teeth feel after using. Mark the absence of the viscous film. See how teeth whiten as the film-coats disappear. Enjoy the refreshing after-effects.

Do this to learn what millions know—the way to whiter, cleaner, safer teeth. Cut out the coupon now.

Pepsodent

"Mention the Geographic—It identifies you."
Just 15 Minutes a Day
What it will mean to you is told by Dr. Eliot
of Harvard in the FREE BOOKLET below

Here are two men of equal position and business income. Which of them represents you?

They read about the same number of hours each week. But one has no plan for his reading; at the end of the year he has little or nothing to show.

The other talks like a man who has traveled widely, though he has never been outside of the United States.

He knows something of Science, though he had to stop school at fifteen. He is at home with History, and the best biographies, and the really great dramas and essays. Older men like to talk to him because he has somehow gained the rare gift of thinking clearly and talking interestingly.

What's the secret of his mental growth? How can a man in a few minutes of pleasant reading each day gain so much?

Dr. Charles W. Eliot, from his lifetime of reading, study, and teaching, forty years of it as President of Harvard University, has answered that question in a free booklet that you can have for the asking. "For me," wrote one man who had sent in the coupon, "your little free book meant a big step forward, and it showed me, besides, the way to a vast new world of pleasure." This free booklet describes the contents, plan and purpose of

DR. ELIOT'S FIVE-FOOT SHELF OF BOOKS

Every well-informed man and woman should at least know something about this famous library.

The free booklet tells about it—how Dr. Eliot has put into his Five-Foot Shelf "the essentials of a liberal education," how he has so arranged it that even "fifteen minutes a day" are enough, how in pleasant moments of spare time, by using the reading courses Dr. Eliot has provided for you, you can get the knowledge of literature and life, the culture, the broad viewpoint that every university strives to give.

Every reader of this magazine is invited to have a copy of this handsome and entertaining little book. It is free, will be sent by mail, and involves no obligation of any sort. Merely clip the coupon and mail it to-day.

This Free Booklet gives Dr. Eliot's own plan of reading

P. F. Collier & Son Company
416 West 13th Street, New York City

Mail me the Free Book, "Fifteen Minutes a Day," telling about the Five-Foot Shelf of Books and containing the valuable article by Dr. Eliot on what and how to read for a liberal education.

Let Your Boy and Girl Grow Up With Master Writers

The youthful mind greedily absorbs impressions, particularly from what is read. These impressions are permanent. Their cumulative effect sways the child's future. By controlling the child's reading, you can counterbalance the harmful impressions received elsewhere.

For fifty years, St. Nicholas Magazine has been edited for boys and girls up to eighteen years of age. The most popular writers for young folks contribute regularly. Serials and short stories: articles on science, nature; tales of other lands; prize contests in drawing, photography, writing—all indicate the many ways in which St. Nicholas nourishes helpful instruction.

In 1922, St. Nicholas will publish stories by Ralph Henry Barbour, Samuel Scoville, Jr., George Jessel Hartley, Dr. and Mrs. Knipe, and articles by Hildegarde Hawthorne, Robert F. Wilson and many other writers who have the knack of interesting and inspiring young people. Let your boy and girl get acquainted with these helpful writers.

One year's subscription is only $1—about half what you pay for your morning paper. Send check or money-order to St. Nicholas Subscription Department, S-24, 555 Fourth Ave., New York.

"Mention The Geographic—It identifies you"
Save the Enamel of Your Teeth

Nature will not restore it

The familiar theory that everyone becomes a new person every seven years is supported by scientific authority.*

An injury to the flesh, the bones, the eyes or other organs may be healed by Nature, but the thin coating of enamel upon your teeth never is renewed, once it is broken or otherwise damaged. Then tooth trouble is almost sure to begin.

So select your dentifrice carefully. Choose a safe one which will wash and polish the enamel, not one which will scour with harsh grit. Colgate's is safe—based on fine precipitated chalk and pure vegetable oil soap. The chalk loosens clinging particles from the enamel, the pure vegetable oil soap washes them away.

**COLGATE'S CLEANS TEETH THE RIGHT WAY**

"Washes"—and Polishes—Doesn't Scour or Scuff

Protect the enamel of your teeth and be fair to your future self by using Colgate's regularly after each meal and just before bedtime.

This Challenge to Useless Expense the Greatest Closed Car Issue

You buy a motor car for reliable transportation. You prefer a closed car for comfort. Body accessories and ornaments have little to do with either.

Why pay a huge premium for them?

Within the limits of a moderate-priced closed car you can get only so much. Ornate body-fittings, dome lights, cigar-lighters, clock, vanity cases, etc., add nothing to car performance. They add much to cost.

Essex elects to put the value elsewhere—to build a comfortable, durable closed car of smart appearance—to mount it on the superb Essex chassis, with what American and European experts have called the greatest motor of its size in the world.

The rigid, overstrength Essex frame, the smooth positive clutch, the simple controls and strong rear axle are some features of that chassis.

The way it is built explains why Essex cars after 60,000 and 70,000 miles of service are still giving fine, smooth, reliable service.

The same idea of utility built the Coach body. It has staunchness and character. It gives the utility of costliest cars. It stays tight and secure.

And isn’t its assurance of continued satisfaction and real automobile service more important than showy body extras in the car that is to serve you?

Touring - - $1045  Cabriolet - - $1145  Coach - - $1245

Preferred by Experienced Travelers

WHY do you find so many seasoned, interesting travelers in the club-like smoking-room of the giant Paris or the wonderful and hospitable salons of the magnificent France? Why are so many of them almost equally at home in New York, London or Paris, at a country club or aboard an ocean liner?

Partly because the giant express liners Paris and France afford the utmost in speed and luxurious accommodations to travelers bound for England or the continent. Largely because French servants, French chefs and the marvelous French cuisine make living more comfortable, enjoyable and delightful.

You too will like these things and you will also enjoy the thoroughly delightful international atmosphere, the old world courtesies and customs and the many forms of diversion and entertainment that make a voyage on the French Line a series of pleasurable experiences.

On the French Line every passenger is a privileged and honored guest.

Regular sailings from New York for Plymouth (England) and Havre by the giant express steamers de luxe,

The best at very little extra cost

THE difference in cost between plate glass and common sheet glass is surprisingly small. Compared with the total cost of either small home or large building, the difference is almost negligible. Yet plate glass effects a decided improvement in appearance.

Plate glass is worked down, smoothed and polished like a fine wood panel. Its beautifully finished surfaces catch the high lights and shadows and reflect them without the ugly and disfiguring distortions of common sheet glass. In a home or building of many windows, plate glass is strikingly effective.

Looking through plate glass is like looking through the open air. Objects appear clear and distinct and in their true shape. There are no annoying waves to distort the view. On the upper floors of hotels, schools, hospitals or office-buildings, the defects of common sheet glass may mar an otherwise impressive view of harbor or city.

See that plate glass is written into the specifications. It will cost a trifle more, but additional cost is more than compensated by enhanced value, and increased rentability or saleability. Get comparative figures from your architect or contractor.

Safety and Service for Subscriber and Advertiser

THE National Geographic Magazine bases its advertising policy upon the unusually intimate relations which exist between its 750,000 owner-subscribers and the publication.

ITS readers are the men, women, and children of the Solid Families of the Nation. As members of the National Geographic Society, they are more than mere subscribers to a periodical—have a very real, proprietary interest in the publication. They realize that all income from the Magazine is used to further the educational projects of their humanitarian organization. It is not surprising, therefore, that they usually speak of "Our Magazine—The Geographic."

ALL advertising for The Geographic's pages naturally receives the closest scrutiny—the honesty of the offer, the high standard of the product, its interest to our readers and the value to the advertiser, make up the sum total of its admissibility.

THIS rigid advertising policy, coupled with the strong mutuality of interest between subscriber and the Magazine, has resulted in implicit reader-confidence and in a maximum responsiveness to advertising from these 750,000 community-leading subscriber homes.

THUS every advertiser is sure of the advertising company in which he will find himself and of the Solid Market reached by his business message. The definite proof will be supplied, without obligation to you, on your request.

Do You Know America's Most Remarkable National Monument?

The Valley of Ten Thousand Smokes

BY

ROBERT F. GRIGGS,
Leader, Katmai-Alaska Expeditions of the National Geographic Society

The first complete account of The Society's five expeditions to the Katmai volcanic region and of the dramatic discovery of this Eighth Wonder of the World

THIS is the book for old or young, layman or scientist, who enjoy constructive adventure and who are interested in earth's marvels and America's unexpected wonders spots. For example, wouldn't you like to know how the cataclysmic Katmai eruption delayed the growth of your own home garden?

With this party of Alaskan explorers, the reader braves fearful heat and skin-burning pumice storms, makes his perilous way over a thin crust among millions of fumaroles emitting superheated gases, camps for weeks on a vast cauldron of boiling mud, cooks his meals over a volcano, yet keeps his meat in an ice cave but a few steps away.

Start your 1923 reading with this delightful and worth-while book. Your friend, too, will appreciate a first edition copy.

350 pages, Royal Octavo (7 x 10 inches); blue cloth, gold stamped; 212 engravings, 16 color plates; six special maps; eight line-drawings; on fine paper.

MILWAUKEE, WISCONSIN

LAfAYETTE
74,434 trips equal 180 years

In ordinary service an electric cleaner travels only 4 times over the same spot on a rug at a single cleaning; twice forward and twice back. Figuring 2 cleanings weekly, the same spot is thus cleaned 48 times a year. In a special test explained below, one Hoover was propelled 74,434 times across a Wilton rug, the equivalent of 180 years of home service, without the slightest injury to the rug.

Is 180 Years of Proof Enough?

If you had heard the occasional remark that electric cleaners are hard on rugs, but could see a rug that had been cleaned by one for the equivalent of 180 years, you would be convinced that the rumor was untrue, wouldn't you?

That is just the evidence that we can offer you on The Hoover.

At a recent test, at the Ohio State Fair held in Columbus, from August 28th to September 2nd, 1922, under the supervision of representatives of the Columbus Chamber of Commerce, a stock Hoover, Model 105, was kept continuously gliding back and forth over the same small piece of ordinary Wilton carpet by a mechanical contrivance designed for the purpose.

For six days the carpet was gently beaten and cleanly swept in the identical manner that rugs in over a million homes are kept free from destructive embedded grit and unsightly clinging litter.

The results of this test are clearly shown in this quotation from a sworn affidavit by the Columbus Chamber of Commerce representatives:

"At the conclusion of this test the exhibit was again inspected, the seals found to be intact, the counter reading showing that The Hoover had made 74,434 single strokes over the carpet. A careful examination of the carpet shows no appreciable wear or other deleterious effects."

Can you afford to let the life of your rugs be curtailed or their beauty diminished by destructive embedded dirt that only the gentle beating-sweeping action of The Hoover can thoroughly remove, when you can buy this efficient cleaner on our convenient payment plan for only 17c to 23c a day?

THE HOOVER COMPANY, NORTH CANTON, OHIO
The oldest and largest makers of electric cleaners
The Hoover is also made in Canada, at Hamilton, Ontario

The HOOVER
It BEATS ... as it Sweeps — as it Cleans
"Shucks!"
"Can't be done!"
"Must be a catch somewhere!"
"What kind of a book can you possibly give me for a dime!"

Good-natured comments like these are often received by us from skeptics; our answer is this: "Let us send you this set of thirty great masterpieces at our risk—not yours. Examine the books in your own home. See for yourself why over 20,000,000 volumes have been purchased by the most intelligent people in the country." Below are some astonishing facts about an offer that seems incredible.

HERE is a fascinating peculiarity of human nature. Why is it that tens of thousands of people unconsciously judge the quality of an article by the price? If the price seems high they think the quality must be exceptional; if the price is amazingly low they say: "Shucks—it can't amount to much."

This skepticism, we realize, is quite natural. When we first offered thirty de luxe, pocket-size volumes of the world's greatest masterpieces, all for only $2.98, we began to receive good-natured comments from doubters who wanted to be "shown." All of these letters were answered as well as we knew how. We explained in detail what these books were, how they looked, of what they were made. We referred to banks and magazines as to our reliability.

Can It Be True?
Moreover, we quoted from remarkable letters of praise sent in by purchasers. We repeated the price—$2.98 plus postage—and explained that this was NOT an installment payment, but the ENTIRE payment—that this was NOT the price of one, or five, or ten of these volumes, but the price of ALL THIRTY. Yet very often these skeptics wrote again and said: "Your offer is too good to be true; there must be a catch somewhere."

What can be done to overcome this natural caution of purchasers who have been accustomed to high prices? We know there must be tens of thousands of people who make this comment, not to us but to themselves. Perhaps you are one of them.

Here Is the Offer
If so, will you allow us to send you these books at our risk—not yours—so that your wife may tell you what an unprecedented bargain this is.

When they arrive, note first that the set includes the finest work of such immortal authors as Shakespeare, Kipling, Stevenson, Emerson, Poe, Cather, Burns, Omar Khayyam, Macaulay, Lincoln.

FREE 4 Volumes Kipling
In same size and binding as rest of set. If you will send the coupon or a letter at once, instead of waiting, you will include some of Kipling's best writing, such as "The Phantom Rickshaw," "The Man Who Was," "The Vampire," "The History of the Maverick's," "My True Story," etc.

Little Leather Library Corp.
Dept. A-121
354 Fourth Ave., New York City

Please send me the 30 volumes of the De Luxe edition of the Little Leather Library (and the 4 volumes of Kipling FEE) by ordinary post. I will pay the postage in full, together with the amount of $2.98 upon delivery. It is understood, however, that this is NOT to be considered a purchase. If the books do not come up to every expectation, I reserve the right to return them any time within thirty days and you agree to return my money. It is understood that $2.98 plus the postage is positively the only payment to be made.
